Saga of the Vacuum Tube G.F.J. Tyne,D.D. Menkes,1977 *Saga of the Vacuum Tube* Gerald F. J. Tyne,1977 *The Saga of the Vacuum Tube ...* Gerald F. J. Tyne,1943 **History of Electron Tubes** Sōgo Okamura,1994 Almost 90 years have passed since the invention of the thermionic electron valve in 1904 by Sir John Ambrose Fleming During this period the development of electron tubes created the so called Electron Age Electron tubes played the leading role in the electronic equipments until the middle of the 1950s when solid state devices such as transistors and integrated circuits replaced electron tubes in various applications and accelerated the electronic age *The Talkies* Donald Crafton,1999-11-22 This text offers readers a look at the time when sound was a vexing challenge for filmmakers and the source of contentious debate for audiences and critics The author presents a view of the talkies reception amongst other issues **Lee de Forest and the Fatherhood of Radio** James A. Hijiya,1992 This book is not so much an analysis of de Forest s contribution to technology as it is a chronicle of his spiritual quest Lee de Forest was an important inventor and this biography attempts to explain what moved him to become one It tries to show how in a universe from which deity had seemingly disappeared de Forest s devotion to invention was part of his search for a new light The book is not a study in the history of technology but in the history of the religion of technology In 1906 de Forest created the Audion the three electrode vacuum tube which became the foundation of the electronics industry for half a century He was a pioneer in radio and talking pictures and he worked on projects ranging from television to solar energy Holder of more than three hundred patents he was one of the most prolific inventors in American history But he was more than that Lee de Forest had an immense curiosity that extended beyond science and engineering to politics literature and religion His active and far ranging mind became a register for many social and intellectual events during his long life from Populism to McCarthyism and from Darwinism to agnosticism But while his interests were diverse his vision was not For him invention was not merely a vocation but a worldview He represented a technological progressivism that advocated reform but reform stemming less from social engineering than from real engineering Although he favored certain improvements in law and education he did not think that these would be the basis of social transformation Instead he believed that inventions ranging from radios to war planes would reform the human condition and that the future was more in the hands of inventors than statesmen The millenium would be a technical innovation with himself as one of its principal inventors As a young man de Forest came to spurn conventional notions of an immortal soul but he never ceased to seek ways to overcome death not merely the physical death of the body but also the spiritual death of living without purpose The fame of his inventions would he hoped keep him forever alive in the memory of posterity Moreover the good that his inventions did for humanity his contribution to progress would give meaning to his existence For Lee de Forest then invention was a substitute for religion By helping to build the future he sought to become an indelible part of it BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Wireless Sungook Hong,2010-01-22 A new look at the early history of wireless communication By 1897 Guglielmo Marconi had transformed James Clerk Maxwell s theory of electromagnetic waves into a workable wireless telegraphy system and by 1907 Lee de Forest had invented the Audion a feedback amplifier and oscillator that opened the way to practical radio transmission Fifteen years after Marconi s invention wireless had become an essential means of communication as well as a hobby for many This book offers a new perspective on the early days of wireless communication Drawing on previously untapped archival evidence and recent work in the history and sociology of science and technology it examines the substance and context of both experimental and theoretical aspects of engineering and scientific practices in the first years of this technology It offers new insights into the relationship between Marconi and his scientific advisor the physicist John Ambrose Fleming inventor of the vacuum tube It includes the full story of the infamous 1903 incident in which Marconi s opponent Nevil Maskelyne interfered with Fleming s public demonstration of Marconi s syntonic tuning system at the Royal Institution by sending derogatory messages from his own transmitter The analysis of the Maskelyne affair highlights the struggle between Marconi and his opponents the efficacy of early syntonic devices Fleming s role as a public witness to Marconi s private experiments and the nature of Marconi s shows It also provides a rare case study of how the credibility of an engineer can be created consumed and suddenly destroyed The book concludes with a discussion of de Forest s Audion and the shift from wireless telegraphy to radio
