Practical Post-Quantum Signatures Kwangjo Kim, 2025-02-15 The current digital signature methods like RSA DSA and ECDSA are relatively simple to understand and their signing and verification processes operate in comparable time frames However in the quantum computing era cryptographic methods must be designed to withstand both classical and quantum attacks This requires an in depth understanding of advanced mathematical concepts like algebraic geometry lattice theory

Gaussian sampling and efficient polynomial computation techniques such as FFT and NTT which are essential for lattice based cryptosystems The FALCON algorithm chosen as a finalist in the NIST Post Quantum Cryptography PQC standardization project is a lattice based hash and sign digital signature scheme known for its efficiency and compactness compared to other quantum resistant signatures like Dilithium and SPHINCS Following FALCON s development the SOLMAE algorithm was introduced in 2021 offering a simplified signing process within the same GPV framework and also implemented in Python for easier accessibility This monograph provides a practical and educational introduction to post quantum digital signatures focusing on the FALCON and SOLMAE algorithms The material aims to bridge the gap between theory and practice offering hands on knowledge of post quantum cryptographic techniques With a focus on clear practical examples using Python this book is a valuable resource for anyone looking to understand or implement quantum secure digital signatures
