**Shaping Urban Infrastructures** Simon Guy,Simon Marvin,Will Medd,Timothy Moss,2012-06-25 Cities can only exist because of the highly developed systems which underlie them ensuring that energy clean water etc are moved efficiently from producer to user and that waste is removed The urgent need to make the way that these services are provided more environmentally socially and economically sustainable means that these systems are in a state of transition from centralized to decentralized energy from passive to smart infrastructure from toll free to road pricing Such transitions are widely studied in the context of the influence of service providers users and regulators Until now however relatively little attention has been given to the growing role of intermediaries in these systems These consist of institutions and organizations acting in between production and consumption for example NGOs who develop green energy

labelling schemes in collaboration with producers and regulators to guide the user consultants who advise businesses on how to save resources and travel agents who match users with providers Such intermediaries are in a position to shape the direction that technological transitions take and ultimately the sustainability of urban networks This book presents the first authoritative collection of research and analysis of the intermediaries that underpin the transitions that are taking place within urban infrastructures showing how intermediaries emerge the role that they play in key sectors including energy water waste and building and what impact they have on the governance of urban socio technical networks **Shaping the Urban Future** ,1994 Advanced Perspectives and Trends in Digital Transformation of Firms, Networks, and Society

**Co-creating Sustainable Urban Futures**

Niki Frantzeskaki, Katharina Hölscher, Matthew Bach, Flor Avelino, 2018-01-09 This is a unique book that provides rich knowledge on how to understand and actively contribute to urban sustainability transitions. The book combines theoretical frameworks and tools with practical experiences on transition management as a framework that supports urban planning and governance towards sustainability. The book offers the opportunity to become actively engaged in working towards sustainable futures of cities. Readers of this book will be equipped to understand the complexity of urban sustainability transitions and diagnose persistent unsustainability problems in cities. Urban planners and professionals will build competences for designing transition management processes in cities and engaging with multidisciplinary knowledge in solution seeking processes. The heart of the book marks the variety of very different local case studies across the world including amongst others Rotterdam in the Netherlands, La Botija in Honduras, Sydney in Australia and Cleveland in the US. These rich studies give inspiration and practical insights to young planners on how to create sustainable urban futures in collaboration with other stakeholders. The case studies and critical reflections on applications of transition management in cities offer food for thought and welcome criticism. They also introduce new lenses to understand the bigger picture that co-creation dynamics play in terms of power, disempowerment, legitimacy and changing actor roles. This will equip the readers with a deep understanding of the dynamics, opportunities and challenges present in urban contexts and urban sustainability transitions.

**Infrastructuring Urban Futures** Alan Wiig, Kevin Ward, Theresa Enright, Mike Hodson, Hamil Pearsall, Jonathan Silver, 2023-05-25 EPDF and EPUB available Open Access under CC BY NC ND licence

Focusing on material and social forms of infrastructure, this edited collection draws on rich empirical details from cities across the global North and South. The book asks the reader to think through the different ways in which infrastructure comes to be present in cities and its co-constitutive relationships with urban inhabitants and wider processes of urbanization. Considering the climate emergency, economic transformation, public health crises and racialized inequality, the book argues that paying attention to infrastructures past, present and future allows us to understand and respond to the current urban condition.

**Managing Urban Futures** Marco Keiner, 2016-12-05 Urbanization is one of the most powerful forces influencing global sustainability. It is dominated by three factors: population growth, rural-urban migration and subsequent urban expansion. Perhaps nowhere are these factors more dominant than in developing countries. This volume brings together leading experts including Alan Gilbert, John Friedmann, Saskia Sassen and Janice Perlman to explore the conflicting challenges of rapid urbanization in developing countries. While all have to contend with key issues such as social segregation, poverty and loss of governability, the ongoing forces of urban growth vary from country to country. By comparing the challenges of urbanization in Africa, Latin America, Asia and the Pacific, this book puts forward a new way of thinking about mega and million cities in developing countries: one that promotes their vital function in society as engines of ideas, technologies, societal change, democratic transformation and loci of political will to build a new regime of global sustainability.
