Shaping National Responses to Climate Change Henry Lee, 1995 Explores methods of designing implementing and gaining political support for strategies and policies to reduce greenhouse gases Assesses the economic policy and management trade offs **Shaping National Responses to Climate Change** Henry Lee, 1995 Explores methods of designing implementing and gaining political support for strategies and policies to reduce greenhouse gases Assesses the economic policy and management trade offs Handbook of Environmental Economics Karl-Goran Maler, Jeffrey R. Vincent, 2003-05-20 The Handbook of Environmental Economics focuses on the economics of environmental externalities and environmental public goods Volume I examines environmental degradation and policy responses from a microeconomic institutional standpoint Its perspective is dynamic including a consideration of the dynamics of natural systems and global with attention paid to issues in both rich and poor nations In addition to chapters on well established topics such as the theory and practice of pollution regulation it includes chapters on new areas of environmental economics research related to common property management regimes population and poverty mechanism design political economy of regulation experimental evaluations of policy instruments and technological change **Climate Change 1995: Economic and Social Dimensions of Climate Change** Hoe-söng Yi, Intergovernmental Panel on Climate Change. Working Group III., 1996-06-27 The consequences of climate change for society are analysed in this landmark assessment from the IPCC This book assesses the available knowledge on the many issues that society has to face including the international decision making framework applicability to climate change of techniques for assessing costs and benefits the significant social costs of projected climate change and the economic assessment of policy instruments to combat climate change nationally and internationally Some important conclusions of this Second Assessment Report indicate that 10 to 30% of greenhouse gas emissions in most countries can be reduced at negative or zero cost no regrets measures Also the literature indicates that climate change will cause aggregate net damage which provides an economic rationale for going beyond no regrets measures It also indicates that a portfolio of mitigation adaptation and research measures is a sound strategy for addressing climate change given the remaining uncertainties This report speaks directly to the issues that are faced by the many countries committed to limit emissions of greenhouse gases by the year 2000 and currently negotiating actions to be taken beyond that date Will be of great value to the international community of policymakers interested in the consequences of climate change as well as to economists social and natural scientists International Environmental Law-making and Diplomacy Tuomas Kuokkanen, Ed Couzens, Tuula Honkonen, Melissa Lewis, 2016-01-29 Bringing together contributions from diplomats UN agency officials lawyers and academics this book provides insight into the evolution of international environmental law diplomacy and negotiating techniques Based on first hand experiences and extensive research the chapters offer a blend of practice and theory history and analysis presenting a range of historical episodes and nuances and drawing lessons for future

improvements to the processes of law making and diplomacy The book represents a synthesis of the most important messages to emerge from the annual course on Multilateral Environmental Agreements delivered to diplomats and negotiators from around the world for the last decade by the University of Eastern Finland and the United Nations Environment Programme The book will be of interest as a guide for negotiators and as a supplementary textbook and a reference volume for a wide range of students of law and environmental issues

International Relations and Global Climate Change Urs Luterbacher, Detlef F. Sprinz, 2001-10-26 This book surveys current conceptual theoretical and methodological approaches to global climate change and international relations Although it focuses on the role of states it also examines the role of nonstate actors and international organizations whenever state centric explanations are insufficient The book begins with a discussion of environmental constraints on human activities the environmental consequences of human activities and the history of global climate change cooperation It then moves to an analysis of the global climate regime from various conceptual and theoretical perspectives These include realism and neorealism historical materialism neoliberal institutionalism and regime theory and epistemic community and cognitive approaches Stressing the role of nonstate actors the book looks at the importance of the domestic international relationship in negotiations on climate change It then looks at game theoretical and simulation approaches to the politics of global climate change It emphasizes questions of equity and the legal difficulties of implementing the UN Framework Convention on Climate Change and the Kyoto Protocol It concludes with a discussion of global climate change and other aspects of international relations including other global environmental accords and world trade The book also contains Internet references to major relevant documents

The Implementation of the Paris Agreement on Climate Change Vesselin Popovski, 2018-10-03 In December 2015 196 parties to the United Nations Framework Convention on Climate Change UNFCCC adopted the Paris Agreement seen as a decisive landmark for global action to stop human induced climate change The Paris Agreement will replace the 1997 Kyoto Protocol which expires in 2020 and it creates legally binding obligations on the parties based on their own bottom up voluntary commitments to implement Nationally Determined Contributions NDCs The codification of the climate change regime has advanced well but the implementation of it remains uncertain This book focuses on the implementation prospects of the Agreement which is a challenge for all and will require a fully comprehensive burden sharing framework Parties need to meet their own NDCs but also to finance and transfer technology to others who do not have enough How equity based and facilitative the process will be is of crucial importance The volume examines a broad range of issues including the lessons that can be learnt from the implementation of previous environmental legal regimes climate policies at national and sub national levels and whether the implementation mechanisms in the Paris Agreement are likely to be sufficient Written by leading experts and practitioners the book diagnoses the gaps and lays the ground for future exploration of implementation options This collection will be of interest to policy makers academics practitioners students and researchers focusing on

climate change governance Handbook of Law and Economics A. Mitchell Polinsky, Steven Shavell, 2007-11-07 Law can be viewed as a body of rules and legal sanctions that channel behavior in socially desirable directions for example by encouraging individuals to take proper precautions to prevent accidents or by discouraging competitors from colluding to raise prices The incentives created by the legal system are thus a natural subject of study by economists Moreover given the importance of law to the welfare of societies the economic analysis of law merits prominent treatment as a subdiscipline of economics Our hope is that this two volume Handbook will foster the study of the legal system by economists The two volumes form a comprehensive and accessible survey of the current state of the field Chapters prepared by leading specialists of the area Summarizes received results as well as new developments **Emissions Trading for Climate Policy** Bernd Hansjürgens, 2005-07-28 The 1997 Kyoto Conference introduced emissions trading as a policy instrument for climate protection Bringing together scholars in the fields of economics political science and law this book which was originally published in 2005 provides a description analysis and evaluation of different aspects of emissions trading as an instrument to control greenhouse gases The authors analyse theoretical aspects of regulatory instruments for climate policy provide an overview of US experience with market based instruments draw lessons from trading schemes for the control of greenhouse gases and discuss options for emissions trading in climate policy They also highlight the background of climate policy and instrument choice in the US and Europe and the foundation of systems in Europe particularly the EU's directive for a CO₂ emissions trading system **Climate Change and International Politics** Narottam Gaan, 2008 Accustomed to understanding security primarily a matter spatial exercise in distancing and boundary making on the part of states and their military alliances to secure borders and institutions from outside threats the nations of the world have so far given a short shrift to the gravity of environmental degradation as a factor or catalyst of intrastate or interstate conflict or at worst a security threat to entire humanity until the shafts of retaliatory responses of the infuriated climate change to the cloddish and brutish power of the rich industrialized nations to destroy it by its emission of carbon dioxide and other greenhouse gases pointed toward man menacing with funereal and cascading consequences of global warming Thus climate change which has so far been on the fringe of human concern or in American President's view a myth or a hoax has catapulted into the center stage of great political flare up among the nations of the world on the issue of apportioning the responsibility on rich industrialized nations or the populous South to mitigate the dangers of climate change which seems to be mired in the contradiction between North's advocacy of inequity in having uncontested access to the atmosphere as carbon sinks and equity while disabusing the atmosphere of the carbon debris Not walking on trodden furrows this book expatiates on the desideratum of a paradigm shift from faith in the Newtonian mechanistic view of the universe to a faith in the profundity of Eastern wisdom and new insights presently found in science which see both nature and human beings as warp and woof woven beautifully into the divine tapestry Improving Compliance with International Environmental Law Jacob

Werksman, James Cameron, Peter Roderick, 2014-01-14 Measures for regulating the behaviour of nation states in relation to the global environment have increasingly taken the form of international treaties and conventions Many have argued that this has proved to be an ineffective way of halting unsustainable development for the provisions of these agreements are either too weak or are flouted regularly by the parties concerned This volume seeks to address the crucial question of how compliance with these agreements could be encouraged effectively without damaging the fragile political consensus that is emerging on environmental issues With extensive use of case studies Improving Compliance will make stimulating reading for all students and researchers working in this area as well as for anyone concerned about the effectiveness of international environmental measures

Views from the Alps Peter Cebon, 1998 Although climate change is a global problem there is growing recognition of the need to look at its regional manifestations and management This book takes such an approach to the Alpine region The result of the ongoing Swiss research program Climate and Environment in the Alpine Region Clear it incorporates the work of an independent network of approximately fifty researchers from a variety of disciplines

The Challenge of Climate Change Daniel P. Perlmutter, Robert L. Rothstein, 2011-06-13 Global warming and climate change present complex interlocking issues of public policy multilateral negotiation and technological advancement This book explores both the problems and the opportunities presented by international agreements and examines the technological developments and policy goals that can be pursued to effect the changes necessary Specific steps are proposed in the form of a list of priorities This book represents a cooperative enterprise between two authors of different backgrounds engineering and international relations and is directed to an educated but non professional lay audience without any formal training in either science or international relations The points of view of negotiators from both developed and developing nations are presented and compared Each topic is presented from both technical and policy perspectives as a means to evaluate the variety of proposals that have been offered as remedies to global warming The text is supported by illustrations and tables where appropriate including a list of References at the end of each chapter

Natural Resource Degradation and Human-Nature Wellbeing Rashed Al Mahmud Titumir, Tanjila Afrin, Mohammad Saeed Islam, 2023-03-09 The book addresses the gaps in the body of knowledge from two grounds Firstly it adds value through explaining the dynamics of natural resource governance by focusing on the particular arenas of biodiversity resources water resources and climate change in developing country context Secondly it critically scrutinizes the market centric perspectives on one hand and combines political economy questions that are generally overlooked in discussions of current resource governance framework on the other It develops a new framework to examine the reasons behind the degradations of natural resources to offer sustainable solutions to the problems It shows that the natural resources have been exploited beyond sustainable limits due to the structural rigidities embedded in and reproduced by fragile institutions and unequal power sharing arrangements under the market centric economic system The book formulates a new understanding of sustainability in case of usage and

management of natural resources by incorporating the idea of human sociality. It highlights the importance of the well-being of nature and human beings must go side by side; one without the other is not a sustainable option. The book contains key learnings for scholars and researchers working in the field of development studies who wish to gain a deeper understanding on the sustainable natural resource governance specifically in the contexts of developing countries. For policymakers and policy advocates, the book serves as the groundwork on policies regarding biodiversity resources, water resources, and climate change specific to the context of developing countries, providing more relevant contents in terms of laying out justification for policy objectives.

Economics of the Environment Robert N. Stavins, 2019. *Economics of the Environment* Seventh Edition is a compendium of the best most timely articles by a dream team of environmental economists together with an original introductory chapter by the editor. Now in its seventh edition, *Economics of the Environment* serves as a valuable supplement to environmental economics text books and as a stand-alone reference book of key up-to-date readings from the field. Edited by Robert N. Stavins, the book covers the core areas of environmental economics courses as taught around the world, and the included authors are the top scholars in the field. Overall, more than half of the chapters are new to this edition, while the rest have remained seminal works.

The Politics of Carbon Markets Benjamin Stephan, Richard Lane, 2014-08-27. The carbon markets are in the middle of a fundamental crisis, a crisis marked by collapsing prices, fleeing actors, and ever-increasing greenhouse gas levels. Yet carbon trading remains at the heart of global attempts to respond to climate change. Not only this, but markets continue to proliferate, particularly in the Global South. *The Politics of Carbon Markets* helps to make sense of this paradox and brings two urgently needed insights to the analysis of carbon markets. First, the markets must be understood in relation to the politics involved in their development, maintenance, and opposition. Second, this politics is multiform and pervasive. Implementation of new techniques and measuring tools, policy development, and contestation, and the structuring context of institutional settings and macro social forces all involve a variety of political actors and create new forms of political agency. The contributions study the total extent of the carbon markets from their prehistory to their contemporary expansion and wider impacts. This wide-ranging political perspective on the carbon markets is invaluable to those studying and interested in ecological markets, climate change governance, and environmental politics.

Making Global Economic Governance Effective Marina Larionova, 2016-06-03. Today's world is crowded with international laws and institutions that govern the global economy. This post-World War II accumulation of hard multilateral and soft plurilateral institutions by no means constitutes a comprehensive coherent and effective system of global economic governance. As intensifying globalization thrusts many longstanding domestic issues onto the international stage, there is a growing need to create at the global level the more comprehensive coherent and effective governance system that citizens have long taken for granted at home. This book offers the first comprehensive look at this critical question of international relations. It examines how and how well the multilateral organizations and the G8 are dealing with the central challenges.

facing the contemporary international community how they have worked well and poorly together and how they can work together more effectively to provide badly needed public goods It is an ideal reference guide for anyone interested in institutions of global governance Keeping International Commitments Eleonore Kokotsis,2014-04-08 This study is the first to offer explanations for compliance with G7 commitments by identifying the patterns explaining the causes and exploring the processes of this compliance from 1988 1995 It provides the only systematic review of the G7 s compliance record in the post Cold War globalizing system of the 1990s and in regard to important environment and development commitments that have often dominated the Summit s agenda during this third cycle of summitry It draws on explanatory factors for Summit compliance from three bodies of international relations theory including regime theory concert theory and the recent extension of regime theory to embrace the effects of domestic political institutions *Public Policies for Environmental Protection* Paul Portney,Robert N. Stavins,2010-10-28 The first edition of *Public Policies for Environmental Protection* contributed significantly to the incorporation of economic analysis in the study of environmental policy Fully revised to account for changes in the institutional legal and regulatory framework of environmental policy the second edition features updated chapters on the EPA and federal regulation air and water pollution policy and hazardous and toxic substances It includes entirely new chapters on market based environmental policies global climate change solid waste and for the first time coverage of the Safe Drinking Water Act Portney Stavins and their contributors provide an invaluable resource for researchers policymakers industry professionals and journalists anyone who needs up to date information on U S environmental policy With their careful explanation of policy alternatives the authors provide an ideal book for students in courses about environmental economics or environmental politics **Global Warming and China's Environmental Diplomacy** Hongyuan Yu,2008 Since the early 1990s there are two increasingly hot topics attracting numerous scholarly attentions in Chinese politics first it is the transformation of China s political system Second it is China s increasingly involvement in international regimes Nevertheless until now there are only a few scholars to work out the distinctive relations between them and even less people work on the bureaucratic politics level By explaining and evaluating the development of policymaking coordination in the United Nations Framework Convention on Climate Change UNFCCC the author demonstrates the argument that international regimes have contributed to the development of coordination in Chinese Policymaking taking the UNFCCC as a departure
