The behavior and sensory biology of elasmobranch fishes: an anthology in memory of Donald Richard Nelson Timothy C. Tricas, Samuel H. Gruber, 2013-06-29 The elasmobranch fishes include the living sharks skates and rays that are important members of nearly all marine ecosystems Their large size secretive behavior and wide ranging habits make them difficult to observe in the field or to maintain in captivity Consequently little is known about their natural behavior and how it is mediated by their sensory systems This volume is dedicated to the scientific contributions and memory of Donald Nelson a pioneer in the study of shark behavior sensory biology and remote instrumentation The two opening papers review Don Nelson s unique scientific accomplishments and provide insight into his strong bias towards study of animals in the field These are followed by 14 scientific papers on elasmobranch behavior sensory biology and current monitoring technologies The papers on elasmobranch sensory biology and behavior address questions on hearing the lateral line electroreception the brain orientation behavior chemical irritants feeding and reproduction The latter section of the volume presents papers on conventional tagging techniques ultrasonic telemetry physiological telemetry remote monitoring techniques archival tagging and satellite tagging The intent of this volume is to familiarize both new and established scientists with the sensory biology and behavior of sharks and rays and to encourage further behavioral research on these animals in their natural environment

Shark Richard Ellis, 2012-04-17 The sharks ancient or modern real or imaginary have always been with us and will probably remain with us forever They appear not only in movies and literature but in countless permutations of size shape and materials permeating our daily lives with their silent menace In a sense humans live in a world replete with sharks not vice versa Thus Richard Ellis sets about chronicling and debunking the myths of sharks throughout history From 18th century art to the phenomena of JAWS the shark has remained the indomitable aggressor of the deep the last demon of humankind The image of the shark and the fear it inspires infiltrates our daily lives with its mythical power and strength But it is not man who should fear the shark Our need to dominate these predators is destroying them and their habitat Through hundreds of full color images Ellis proves the necessity of preserving these majestic creatures As curator of the Ft Lauderdale Museum of Art s exhibition entitled Shark debuting May 2012 Ellis adeptly turns these sleek efficient hunters from monsters of the deep into rare beautiful forces of nature
