Kennedy,2012-04-05 This book shows amateur astronomers how to use one shot CCD cameras and how to get the best out of equipment that exposes all three color images at once Because this book is specifically devoted to one shot imaging One Shot Color Astronomical Imaging begins by looking at all the basics what equipment will be needed how color imaging is done and most importantly what specific steps need to be followed after the one shot color images are taken What is one shot color imaging Typically astronomical cooled chip CCD cameras record only one color at a time rather like old fashioned black white cameras fitted with color filters Three images are taken in sequence in red blue and green light and these are then merged by software in a PC to form a color image Each of the three images must be taken separately through a suitable color filter which means that the total exposure time for every object is more than tripled When exposure times can run into tens of minutes or even hours for each of the three colors this can be a major drawback for the time pressed amateur One Shot Color Astronomical Imaging describes the most cost effective and time efficient way for any amateur astronomer to begin to photograph the deep sky **Proceedings of 4th International Conference in Software Engineering for Defence Applications** Paolo Ciancarini,Alberto Sillitti,Giancarlo Succi,Angelo Messina,2016-01-25 This book presents high quality original contributions on new software engineering models approaches methods and tools and their evaluation in the context of defence and security applications In addition important business and economic aspects are discussed with a particular focus on cost benefit analysis new business models organizational evolution and business

intelligence systems The contents are based on presentations delivered at SEDA 2015 the 4th International Conference in Software Engineering for Defence Applications which was held in Rome Italy in May 2015 This conference series represents a targeted response to the growing need for research that reports and debates the practical implications of software engineering within the defence environment and also for software performance evaluation in real settings through controlled experiments as well as case and field studies The book will appeal to all with an interest in modeling managing and implementing defence related software development products and processes in a structured and supportable way
