Neural Nets Bruno Apolloni, Maria Marinaro, Giuseppe Nicosia, Roberto Tagliaferri, 2006-03-11 This book constitutes the thoroughly refereed postproceedings of the 16th Italian Workshop on Neural Nets WIRN 2005 as well as the satellite International Workshop on Natural and Artificial Immune Systems NAIS 2005 held in Vietri sul Mare Italy in June 2005 The 41 revised papers presented together with a lecture by the winner of the Premio Caianiello award were carefully reviewed and improved during two rounds of selection and refereeing

Engineering Applications of Bio-Inspired Artificial Neural Networks Jose Mira, Juan V. Sanchez-Andres, 1999-05-19 This book constitutes together with its companion LNCS 1606 the refereed proceedings of the International Work Conference on Artificial and Neural Networks IWANN 99 held in Alicante Spain in June 1999 The 91 revised papers presented were carefully reviewed and selected for inclusion in the book This volume is devoted to applications of biologically inspired artificial neural networks in various engineering disciplines The papers are organized in parts on artificial neural nets simulation and implementation image processing and engineering applications

Lectures on Soft Computing and Fuzzy Logic Antonio Di Nola, Giangiacomo Gerla, 2001-07-31 The present volume collects selected papers arising from lectures delivered by the authors at the School on Fuzzy Logic and Soft Computing held during the years 1996-97-98-99 and sponsored by the Salerno University The authors contributing to this volume agreed with editors to write down to enlarge and in many cases to rethink their original lectures in order to offer to readership a more compact presentation of the proposed topics The aim of the volume is to offer a picture as a job in progress of the effort that is coming

in founding and developing soft computing techniques The volume contains papers aimed to report on recent results containing genuinely logical aspects of fuzzy logic The topics treated in this area cover algebraic aspects of Lukasiewicz Logic Fuzzy Logic as the logic of continuous t norms Intuitionistic Fuzzy Logic Aspects of fuzzy logic based on similarity relation are presented in connection with the problem of flexible querying in deductive database Departing from fuzzy logic some papers present results in Probability Logic treating computational aspects results based on indistinguishability relation and a non commutative version of generalized effect algebras Several strict applications of soft computing are presented in the book Indeed we find applications ranging among pattern recognition image and signal processing evolutionary agents fuzzy cellular networks classification in fuzzy environments The volume is then intended to serve as a reference work for foundational logical algebraic aspect of Soft Computing and for concrete applications of soft computing technologies

Advances in Intelligent Systems Francesco Carlo Morabito, 1997 Intelligent Systems can be defined as systems whose design mainly based on computational techniques is supported in some parts by operations and processing skills inspired by human reasoning and behaviour Intelligent Systems must typically operate in a scenario in which non linearities are the rule and not as a disturbing effect to be corrected Finally Intelligent Systems also have to incorporate advanced sensory technology in order to simplify man machine interactions Several algorithms are currently the ordinary tools of Intelligent Systems This book contains a selection of contributions regarding Intelligent Systems by experts in diverse fields Topics discussed in the book are Applications of Intelligent Systems in Modelling and Prediction of Environmental Changes Cellular Neural Networks for NonLinear Filtering NNs for Signal Processing Image Processing Transportation Intelligent Systems Intelligent Techniques in Power Electronics Applications in Medicine and Surgery Hardware Implementation and Learning of NNs

Knowledge-based Neurocomputing Ian Cloete, Jacek M. Zurada, 2000 Looking at ways to encode prior knowledge and to extract refine and revise knowledge within a neurocomputing system Neurocomputing methods are loosely based on a model of the brain as a network of simple interconnected processing elements corresponding to neurons These methods derive their power from the collective processing of artificial neurons the chief advantage being that such systems can learn and adapt to a changing environment In knowledge based neurocomputing the emphasis is on the use and representation of knowledge about an application Explicit modeling of the knowledge represented by such a system remains a major research topic The reason is that humans find it difficult to interpret the numeric representation of a neural network The key assumption of knowledge based neurocomputing is that knowledge is obtainable from or can be represented by a neurocomputing system in a form that humans can understand That is the knowledge embedded in the neurocomputing system can also be represented in a symbolic or well structured form such as Boolean functions automata rules or other familiar ways The focus of knowledge based computing is on methods to encode prior knowledge and to extract refine and revise knowledge within a neurocomputing system Contributors C Aldrich J Cervenka I Cloete R A Cozzio R Drossu J Fletcher

Carsetti, 2013-11-11 Our ontology as well as our grammar are as Quine affirms ineliminable parts of our conceptual contribution to our theory of the world It seems impossible to think of entities individuals and events without specifying and constructing in advance a specific language that must be used in order to speak about these same entities We really know only insofar as we regiment our system of the world in a consistent and adequate way At the level of proper nouns and existence functions we have for instance a standard form of a regimented language whose complementary apparatus consists of predicates variables quantifiers and truth functions If for instance the discoveries in the field of Quantum Mechanics should oblige us in the future to abandon the traditional logic of truth functions the very notion of existence as established until now will be challenged These considerations as developed by Quine introduce us to a conceptual perspective like the internal realist perspective advocated by Putnam whose principal aim is for certain aspects to link the philosophical approaches developed respectively by Quine and Wittgenstein Actually Putnam conservatively extends the approach to the problem of reference outlined by Quine in his opinion to talk of facts without specifying the language to be used is to talk of nothing

Emergence in Complex, Cognitive, Social, and Biological Systems Gianfranco Minati, Eliano Pessa, 2012-12-06 The systems movement is made up of many systems societies as well as of disciplinary researchers and researches explicitly or implicitly focusing on the subject of systemics officially introduced in the scientific community fifty years ago Many researches in different fields have been and continue to be sources of new ideas and challenges for the systems community To this regard a very important topic is the one of EMERGENCE Between the goals for the actual and future systems scientists there is certainly the definition of a general theory of emergence and the building of a general model of it The Italian Systems Society Associazione Italiana per la Ricerca sui Sistemi AIRS decided to devote its Second National Conference to this subject Because AIRS is organized under the form of a network of researchers institutions scholars professionals and teachers its research activity has an impact at different levels and in different ways Thus the topic of emergence was not only the focus of this conference but it is actually the main subject of many AIRS activities **New**
