Numerical Analysis For Integral And Related Operator Equations Operator Theory Advances And Applications Volume 5:

Contributions to Operator Theory and Its Applications Takayuki Furuta, Israel Gohberg, Takahiko Nakazi, 1993 On Certain Nearly Convex Joint Numerical Ranges The Two Sided Nevanlinna Pick Problem in the Stieltjes Class State Space Formulas for Coprime Factorizations Generalization of Heinz Kato Theorem via Furuta Inequality The Band Method for Bordered Algebras L_p Distance Between Unitary Orbits in Type III Factors Finite Dimensional Solution Sets of Extremal Problems in H_1 Factorization of Operators with Angularly Constrained Spectra On the Coefficients of Riemann Mappings on the Unit Disk into Itself Weak Star Limits of Polynomials and their Derivatives Hausdorff Dimension of Some Fractals and Perron Frobenius Theory Operators Which have Commutative Polar Decompositions Trace Formula for the Perturbation of Partial Differential Operator and Cyclic Cocycle on a Generalized Heisenberg Group *Toeplitz Matrices and Singular Integral Equations* Albrecht Böttcher, Israel Gohberg, P. Junghanns, 2012-12-06 This volume dedicated to Bernd Silbermann on his sixtieth birthday collects research articles on Toeplitz matrices and singular integral equations written by leading area experts The subjects of the contributions include Banach algebraic methods Toeplitz determinants and random matrix theory Fredholm theory and numerical analysis for singular integral equations and efficient algorithms for linear systems with structured matrices and reflect Bernd Silbermann's broad spectrum of research interests The volume also contains a biographical essay and a list of publications The book is addressed to a wide audience in the mathematical and engineering sciences The articles are carefully written and are accessible to motivated readers with basic knowledge in functional analysis and operator theory

New Results in Operator Theory and Its Applications Israel Gohberg, Yuri I. Lyubich, 1997-08-19 This volume is dedicated to the memory of Israel Glazman an outstanding personality and distinguished mathematician the author of many remarkable papers and books in operator theory and its applications The present book opens with an essay devoted to Glazman's life and scientific achievements It focusses on the areas of his unusually wide interests and consists of 18 mathematical papers in spectral theory of differential operators and linear operators in Hilbert and Banach spaces analytic operator functions ordinary and partial differential equations functional equations mathematical physics nonlinear functional analysis approximation theory and optimization and mathematical statistics The book gives a picture of the current state of some important problems in areas of operator theory and its applications and will be of interest to a wide group of researchers working in pure and applied mathematics **Nonselfadjoint Operator Algebras, Operator Theory, and**

Related Topics Hari Bercovici, 1998 This volume dedicated to Carl Pearcy on the occasion of his 60th birthday presents recent results in operator theory nonselfadjoint operator algebras measure theory and the theory of moments The articles on these subjects have been contributed by leading area experts many of whom were associated with Carl Pearcy as students or collaborators *Matrix and Operator Valued Functions* I. Gohberg, L.A. Sakhnovich, 2012-12-06 This book is dedicated to the

memory of an outstanding mathematician and personality Vladimir Petrovich Potapov who made important contributions to and exerted considerable influence in the areas of operator theory complex analysis and their points of juncture The book commences with insightful biographical material and then presents a collection of papers on different aspects of operator theory and complex analysis covering those recent achievements of the Odessa Kharkov school in which Potapov was very active The papers deal with interrelated problems and methods The main topics are the multiplicative structure of contractive matrix and operator functions operators in spaces with indefinite scalar products inverse problems for systems of differential equations interpolation and approximation problems for operator and matrix functions The book will appeal to a wide group of mathematicians and engineers and much of the material can be used for advanced courses and seminars

Mathematical Results in Quantum Mechanics Jaroslav Dittrich, Pavel Exner, Milos Tater, 2012-12-06 At the age of almost three quarters of a century quantum mechanics is by all accounts a mature theory There were times when it seemed that it had borne its best fruit already and would give way to investigation of deeper levels of matter Today this sounds like rash thinking Modern experimental techniques have led to discoveries of numerous new quantum effects in solid state optics and elsewhere Quantum mechanics is thus gradually becoming a basis for many branches of applied physics in this way entering our everyday life While the dynamic laws of quantum mechanics are well known a proper theoretical understanding requires methods which would allow us to derive the abundance of observed quantum effects from the first principles In many cases the rich structure hidden in the Schrödinger equation can be revealed only using sophisticated tools This constitutes a motivation to investigate rigorous methods which yield mathematically well founded properties of quantum systems

Orthogonal Systems and Convolution Operators Robert Ellis, Israel Gohberg, 2003 The main concern of this book is the distribution of zeros of polynomials that are orthogonal on the unit circle with respect to an indefinite weighted scalar or inner product The first theorem of this type proved by M G Krein was a far reaching generalization of G Szegő's result for the positive definite case A continuous analogue of that theorem was proved by Krein and H Langer These results as well as many generalizations and extensions are thoroughly treated in this book A unifying theme is the general problem of orthogonalization with invertible squares in modules over $\mathbb{C}$ algebras Particular modules that are considered in detail include modules of matrices matrix polynomials matrix valued functions linear operators and others One of the central features of this book is the interplay between orthogonal polynomials and their generalizations on the one hand and operator theory especially the theory of Toeplitz matrices and operators and Fredholm and Wiener Hopf operators on the other hand The book is of interest to both engineers and specialists in analysis

Interpolation Theory, Systems Theory and Related Topics Daniel Alpay, Israel Gohberg, Victor Vinnikov, 2012-12-06 This volume is dedicated to Harry Dym a leading expert in operator theory on the occasion of his sixtieth birthday The book opens with an autobiographical sketch a list of publications and a personal account of I Gohberg on his collaboration with Harry Dym The mathematical papers cover Krein space operator

theory Schur analysis and interpolation several complex variables and Riemann surfaces matrix theory system theory and differential equations and mathematical physics The book is of interest to a wide audience of pure and applied mathematicians electrical engineers and theoretical physicists

Topics In Interpolation Theory Harry Dym, 1997 Vladimir Petrovich Potapov as remembered by colleagues friends and former students On a minimum problem in function theory and the number of roots of an algebraic equation inside the unit disc On tangential interpolation in reproducing kernel Hilbert modules and applications Notes on a Nevanlinna Pick interpolation problem for generalized Nevanlinna functions The indefinite metric in the Schur interpolation problem for analytic functions IV Bitangential interpolation for upper triangular operators Bitangential interpolation for upper triangular operators when the Pick operator is strictly positive Integral representations of a pair of nonnegative operators and interpolation problems in the Stieltjes class On recovering a multiplicative integral from its modulus On Schur functions and Szeg orthogonal polynomials Hilbert spaces of entire functions as a J theory subject On transformations of Potapov's fundamental matrix inequality An abstract interpolation problem and the extension theory of isometric operators On the theory of matrix valued functions belonging to the Smirnov class Integral representation of function of class K_a On the theory of entire matrix functions of exponential type Analogs of Nehari and Sarason theorems for character automorphic functions and some related questions The Blaschke Potapov factorization theorem and the theory of nonselfadjoint operators Weyl matrix circles as a tool for uniqueness in the theory of multiplicative representation of J inner functions On a criterion of positive definiteness Matrix boundary value problems with eigenvalue dependent boundary conditions The linear case Weyl Titchmarsh functions of the canonical periodical system of differential equations On boundary values of functions regular in a disk

Schur Functions, Operator Colligations, and Reproducing Kernel Pontryagin Spaces Daniel Alpay, Aad Dijksma, James Rovnyak, Hendrik de Snoo, 2012-12-06 Generalized Schur functions are scalar or operator valued holomorphic functions such that certain associated kernels have a finite number of negative squares This book develops the realization theory of such functions as characteristic functions of coisometric isometric and unitary colligations whose state spaces are reproducing kernel Pontryagin spaces This provides a modern system theory setting for the relationship between invariant subspaces and factorization operator models Krein Langer factorizations and other topics The book is intended for students and researchers in mathematics and engineering An introductory chapter supplies background material including reproducing kernel Pontryagin spaces complementary spaces in the sense of de Branges and a key result on defining operators as closures of linear relations The presentation is self contained and streamlined so that the indefinite case is handled completely parallel to the definite case
