Numerische Methoden Der Analysis:

Analytical Methods for Heat Transfer and Fluid Flow Problems Bernhard Weigand, 2015-05-05 This book describes useful analytical methods by applying them to real world problems rather than solving the usual over simplified classroom problems The book demonstrates the applicability of analytical methods even for complex problems and guides the reader to a more intuitive understanding of approaches and solutions Although the solution of Partial Differential Equations by numerical methods is the standard practice in industries analytical methods are still important for the critical assessment of results derived from advanced computer simulations and the improvement of the underlying numerical techniques Literature devoted to analytical methods however often focuses on theoretical and mathematical aspects and is therefore useless to most engineers Analytical Methods for Heat Transfer and Fluid Flow Problems addresses engineers and engineering students The second edition has been updated the chapters on non linear problems and on axial heat conduction problems were extended And worked out examples were included

Numerical Algorithms with C Giesela Engeln-Müllges, Frank Uhlig, 2013-11-21 More scientists now use C than any other programming language This book contains practical computer ready algorithms for many standard methods of numerical mathematics It describes the principles of the various methods and provides support in choosing the appropriate method for a given task Topics given special emphasis include converging methods for solving nonlinear equations methods for solving systems of linear equations for many special matrix structures and the Shepard method for multidimensional interpolation The CD contains C programs for almost all the algorithms given in the book and a compiler together with software for graphical printing

Multifield Problems in Solid and Fluid Mechanics Rainer Helmig, Alexander Mielke, Barbara I. Wohlmuth, 2006-11-28 Understanding the interaction between various processes is a pre requisite for solving problems in natural and engineering sciences Many phenomena can not be described by concentrating on them in isolation therefore multifield models and concepts that include various kinds of field problems and processes are needed This book summarizes the main scientific results of the Collaborative Research Center on Multifield Problems in Continuum Mechanics Sonderforschungsbereich Mehrfeldprobleme in der Kontinuumsmechanik SFB 404 funded by the German Research Foundation DFG from 1995 2006 The book is divided into three main sections A Volume Coupled Problems devoted to fields which are coupled inside the processing domain or volume B Boundary Coupled Problems here physical fields and processes are coupled via domain boundaries C Fundamental Methods search into the mathematical concepts and backgrounds of multifield and multiscale modeling

Progress in Approximation Theory and Applicable Complex Analysis Narendra Kumar Govil, Ram Mohapatra, Mohammed A. Qazi, Gerhard Schmeisser, 2017-04-03 Current and historical research methods in approximation theory are presented in this book beginning with the 1800s and following the evolution of approximation theory via the refinement and extension of classical methods and ending with recent techniques and methodologies Graduate students postdocs and researchers in mathematics specifically those working in the theory of functions approximation theory geometric function theory and optimization will find new insights as well as a guide to advanced topics The chapters in this book are grouped into four themes the first polynomials Chapters 1 8 includes inequalities for polynomials and rational functions orthogonal polynomials and location of zeros The second inequalities and extremal problems are discussed in Chapters 9 13 The third approximation of functions involves the approximants being polynomials rational functions and other types of functions and are covered in Chapters 14 19 The last theme quadrature cubature and applications comprises the final three chapters and includes an article coauthored by Rahman This volume serves as a memorial volume to commemorate the distinguished career of Qazi Ibadur Rahman 1934 2013 of the Universit de Montr al Rahman was considered by his peers as one of the prominent experts in analytic theory of polynomials and entire functions The novelty of his work lies in his profound abilities and skills in applying techniques from other areas of mathematics such as optimization theory and variational principles to obtain final answers to countless open problems

Glocalized Solutions for Sustainability in Manufacturing Jürgen Hesselbach, Christoph Herrmann, 2011-03-19 The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment product development sustainable manufacturing and end of life management The theme Glocalized Solutions for Sustainability in Manufacturing addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products services and processes taking into account local capabilities and constraints to achieve an economically socially and environmentally sustainable society in a global perspective Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions Products and services need to be addressed that ensure a high standard of living everywhere Resources required for manufacturing and use of such products are limited and not evenly distributed in the world Locally available resources local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas
