Hill, 2016-12-02 Plasticity in insulin producing cells of the pancreas is a major contributor to metabolic control Targeted regeneration of pancreatic cells for the reversal of diabetes by optimizing cells mass and proliferation to meet metabolic requirements and counter autoimmune response is still a theoretical intervention This monograph reviews the biology ontogeny capabilities and present practical limitations of cell plasticity Relevant biochemical pathways are described with the inclusion of information about how they change with aging during pregnancy and with diet Readers will learn the following key aspects about cell plasticity current knowledge of pancreatic cells development and how cell mass and proliferation change throughout the human lifespan the mechanisms responsible for cell plasticity based on animal models and clinical studies revealing environmental epigenetic endocrine and paracrine regulators the therapeutic potential of resident stem cells within the pancreas bone marrow and cell progenitors This monograph is essential reading for researchers interested in updated knowledge about the molecular and cellular biology of cells in the quest to find a reliable therapy for diabetes Nutrients and Oxidative Stress: Biochemistry Aspects and Pharmacological Insights Bee Ling Tan, Mohd Esa Norhaizan, 2024-11-28 Oxidative stress plays a prominent role in the development of numerous human diseases associated with animal based protein high carbohydrate diets and excessive fat consumption Obesity represents the main risk factor for chronic diseases such as cardiovascular disease cancer and type 2 diabetes Extensive research highlights the detrimental impacts of diets high in saturated fat and refined carbohydrates Type 2 diabetes cardiovascular disease and obesity are attributed to the sedentary lifestyles overconsumption of foods high in saturated fats and carbohydrates and the saturation of nutrient storage Indeed the effects of oxidative stress are associated with the absolute quantity and the type of macronutrients both of these aspects contribute to oxidative stress and may favor the development of obesity associated diseases and obesity Nonetheless the underlying mechanisms of nutritionally mediated oxidative stress are complex and poorly understood The literature reported on nutritionally mediated oxidative stress and the role of diets in oxidative stress induced diseases has not well been compiled in a singular source *Nutrients and Oxidative Stress Biochemistry Aspects and Pharmacological Insights* explores how dietary choices dampen or exacerbate inflammation and oxidative stress The implications of oxidative stress in glucose metabolism and adipocyte and obesity associated non communicable diseases are also discussed in this brief Several issues linked to nutritionally mediated oxidative stress including high carbohydrates high animal based proteins and excessive consumption of fats and oxidative stress and molecular mechanisms of oxidative stress induced diseases are covered The role of diets in oxidative stress induced diseases is also discussed By summarizing all the literature in one place this work provides a cohesive representation of the information and practical reference on the

underlying mechanisms of nutritionally mediated oxidative stress involved in the prevention of chronic diseases The work provides a better understanding of the nutritionally mediated oxidative stress and the molecular mechanisms of oxidative stress in the development of chronic diseases and obesity **Insulin and IGFs** ,2009-03-10 First published in 1943

Gillman,Peter D. Gluckman,Ron G. Rosenfeld,2013 Growth in mammals encompasses several stages from intrauterine growth through infancy and childhood to adolescence Each of these phases is characterized by very specific nutritional molecular and endocrine perspectives which under ideal conditions allow the organism to achieve its genetically programmed growth patterns In this book an international panel of experts addresses these topics in a historical physiological and social perspective The first part investigates the genetic epigenetic molecular and nutritional determinants of intrauterine and postnatal growth Part two deals with non evolutionary changes which occurred in the recent past such as changes in body size in utero during infancy and childhood and during adolescence and the potentially unfavorable consequences of enhanced nutrition and growth including early onset of puberty development of obesity and increases in metabolic and cardiovascular disease The last part addresses the question of which factors define healthy growth in light of the influence of nutritional molecular and endocrine influences Although the association between rapid changes in body size and adverse health effects is clear the precise nature

of causality remains uncertain Presenting the latest scientific findings in growth research this publication provides essential reading for pediatricians clinical investigators and health workers
