

Social & Behavior Change in Nutrition: What Works?

Nutrition programs are meaningful only to the degree that they help people do something differently. That is where social and behavior change (SBC) methods can help. In our experience, we have seen program planners miss opportunities to achieve much bigger and more lasting impact of their SBC work. The nine tips we offer here show you what you can do at each stage of a program cycle to avoid missing such great opportunities and to contribute to real, positive changes in people's lives.

PROJECT DESIGN

1. Plan an ongoing, iterative workflow of the ever-evolving and flexible evidence, study, or program cycle. This approach allows for continuous learning and adaptation, and the program can evolve as the evidence base grows. It is important to build in time for reflection and adaptation in response to new evidence and needs.

2. Develop a strong evidence base. Evidence is the foundation for change, and there is no one-size-fits-all approach. It is important to understand the context of the problem, the target population, and the behavior to be changed. The evidence base should be a mix of quantitative and qualitative data, and it should be updated regularly.

3. Address the key challenges. Addressing the key challenges is essential for success. This includes understanding the barriers to change, the target population, and the behavior to be changed. It is important to develop a clear understanding of the problem and the target population, and to develop a plan to address the key challenges.

EVALUATION

9. Understand what a program that will work. It is not only whether a program works, but also how it works. Understanding the mechanisms of change is essential for designing effective programs. It is important to develop a clear understanding of the problem and the target population, and to develop a plan to address the key challenges.
