Privacy and Health Care James M. Humber, Robert F. Almeder, 2001-04-20 Western societies generally recognize both a legal and a moral right to privacy However at the present time there is no settled opinion in the United States regarding how these rights should relate to medical information On the one hand virtually everyone agrees that one's medical records should not be open to just any interested person's inspection On the other hand most also agree that some sacrifices in medical privacy are necessary for scientific advancement public health protection and other social goals However what limits should be set upon those sacrifices and how those limits should be determined have long been issues of debate In recent years this debate has intensified There are a variety of reasons for this to mention only three 1 Over the years the US health care delivery system has become increasingly complex and with this complexity there has come a need for more and more people to have access to patients medical records With each transference of information breaches in confidentiality become more likely 2 Medical costs have risen at an alarming rate This makes health insurance a virtual necessity for adequate medical care and people worry that they will be denied employment and or medical coverage if

certain sorts of medical information are not kept strictly confidential 3 Finally many medical records are now kept in computer files and the impossibility of guaranteeing confidentiality for files of this sort is a constant worry

Privacy and Healthcare Data Christina Munns, Subhajit Basu, 2017-05-15 In order for the information society to realise its full potential personal data has to be disclosed used and often shared This book explores the disclosure and sharing of data within the area of healthcare Including an overview of how health information is currently managed the authors argue that with changes in modern society the idea of personal relationships with a local GP who solely holds and controls your health records is becoming rapidly outdated The authors aim to encourage and empower patients to make informed choices about sharing their health data They do this by developing a three stage theoretical model for change to the roles of the NHS and the individual The study generates debate to stimulate and inspire new models and policy and to provoke new visions for the sharing of healthcare data Such discussion is framed through an exploration of the changing concept of privacy and patient control in healthcare information management The volume draws on best practices from Europe and the USA and combines these to form a suggested vision for the UK as an early adopter of change The volume will be essential reading for academics in the field of privacy and data protection as well as healthcare and informatics professionals across different jurisdictions
