Safe And Sound Artificial Intelligence In Hazardous Applications:

Safe and Sound John Fox,Subrata Kumar Das,2000 Fox and Das insist that the same intelligence artificial and human must be applied to guaranteeing safety as to assuring acceptable task performance Medicine is an excellent field for application of this approach but it also serves as an example for the entire field of design where issues of safety are never absent BOOK JACKET   Computer-based Medical Guidelines and Protocols: A Primer and Current Trends A. Ten Teije,S. Miksch,P. Lucas,2008-07-24 This book brings together results from different branches of computer science in particular artificial intelligence medical informatics and medicine to examine cutting edge approaches to computer based guideline modeling verification and interpretation Different methods have been developed to support the development deployment maintenance and use of evidence based guidelines using techniques from artificial intelligence software engineering medical informatics and formal methods Such methods employ different representation formalisms and computational techniques As the guideline related research spans a wide range of research communities a comprehensive integration of the results of these communities was lacking It is the intention of this book to fill this gap It is the first book of its kind that partially has the nature of a textbook The book consists of two parts The first part consists of nine chapters which together offer a comprehensive overview of the most important medical and computer science aspects of clinical guidelines and protocols The second part of the book consists of chapters that are extended versions of selected papers that were originally submitted to the ECAI 2006 workshop AI Techniques in Health Care Evidence based Guidelines and Protocols These chapters will provide the reader detailed information about actual research in the area by leading researchers   NASA Formal Methods Aaron Dutle,César Muñoz,Anthony Narkawicz,2018-04-06 This book constitutes the proceedings of the 10th International Symposium on NASA Formal Methods NFM 2018 held in Newport News VA USA in April 2018 The 24 full and 7 short papers presented in this volume were carefully reviewed and selected from 92 submissions The papers focus on formal techniques and other approaches for software assurance their theory current capabilities and limitations as well as their potential application to aerospace robotics and other NASA relevant safety critical systems during all stages of the software life cycle

Symbolic and Quantitative Approaches to Reasoning with Uncertainty Claudio Sossai,Gaetano Chemello,2009-06-05 This book constitutes the refereed proceedings of the 10th European Conference on Symbolic and Quantitative Approaches to Reasoning with Uncertainty ECSQARU 2009 held in Verona Italy July 1 3 2009 There are 76 revised full papers presented together with 3 invited lectures by three outstanding researchers in the area All papers were carefully reviewed and selected from 118 submissions for inclusion in the book The papers are organized in topical sections on algorithms for uncertain inference argumentation systems Bayesian networks Belief functions Belief revision and inconsistency handling classification and clustering conditioning independence inference default reasoning foundations of reasoning decision making under uncertainty Fuzzy sets and Fuzzy logic implementation and application of uncertain systems logics for reasoning under

uncertainty Markov decision process and Mathematical Fuzzy Logic **Applications of Software Agent Technology in the Health Care Domain** Antonio Moreno,John L. Nealon,2003-10-24 This volume contains a collection of papers that provides a unique novel and up to date overview of how software agents technology is being applied in very diverse problems in health care ranging from community care to management of organ transplants It also provides an introductory survey that highlights the main issues to be taken into account when deploying agents in the health care area The intended audience includes graduate and postgraduate students specializing in artificial intelligence and researchers interested in the application of new technologies *Modelling High-level Cognitive Processes* Richard P. Cooper With Contributi,Peter G. Yule,John Fox,David W. Glasspool,Richard P. Cooper,2013-05-13 This book is a practical guide to building computational models of high level cognitive processes and systems High level processes are those central cognitive processes involved in thinking reasoning planning and so on These processes appear to share representational and processing requirements and it is for this reason that they are considered together in this text The book is divided into three parts Part I considers foundational and background issues Part II provides a series of case studies spanning a range of cognitive domains Part III reflects upon issues raised by the case studies Teachers of cognitive modeling may use material from Part I to structure lectures and practical sessions with chapters in Part II forming the basis of in depth student projects All models discussed in this book are developed within the COGENT environments COGENT provides a graphical interface in which models may be sketched as box and arrow diagrams and is both a useful teaching tool and a productive research tool As such this book is designed to be of use to both students of cognitive modeling and active researchers For students the book provides essential background material plus an extensive set of example models exercises and project material Researchers of both symbolic and connectionist persuasions will find the book of interest for its approach to cognitive modeling which emphasizes methodological issues They will also find that the COGENT environment itself has much to offer **Multidisciplinary Approaches to Theory in Medicine** Ray Paton,Laura A. McNamara,2006-01-06 This volume will be a collection of chapters from authors with wide experience in their research field The purpose is to produce a coherent book that reflects the common theme of theory in medical thinking and multidisciplinary research practice In this context theory relates to frameworks of concepts facts models etc that help to inform practitioners clinicians scientists and engineers both within their own fields and as they seek to share dialogue with colleagues from other fields Multidisciplinary Approaches to Theory in Medicine will therefore be integrative across a broad spectrum of fields within medicine To achieve this the chapters will be associated with others in a number of meaningful ways Each chapter will share a number of points of contact that will include at least two of the following Similar biomedical area e g immunity neuroscience endocrinology pathology oncology haematology Similar multidisciplinary theoretical contexts e g modelling analysis description visualization complex systems Similar multidisciplinary medical issues and questions e g clinical practice decision making informatics Uniquely explores

role of interdisciplinary exchange in the development and expansion of medical theory Timely and insightful essays on the growth and development of medical theories from some of the world s top clinicians and medical researchers including Werner Arber Frank Vertosick and David Weatherall Assembles diverse perspectives on medicine and physiology from biology statistics ethics computer science philosophy history Uniquely illuminates the social and historical processes through which theoretical research translates into clinical practice Reveals the growing role of technology especially computational modelling in changing the nature of Western medicine   The Handbook of Human-Machine Interaction Guy A.
