**Designing for Reliability and Safety Control** Ernest J. Henley,Hiromitsu Kumamoto,1985

**Human Factors Engineering Aspects of Instrumentation and Control System Design** IAEA,2021-03-31

Safety reliability and productivity in the nuclear industry result from a systematic consideration of human performance A plant or other facility consists of both the engineered system and the human users of that system It is therefore crucial that engineering activities consider the humans who will be interacting with those systems Engineering design specifically instrumentation and control I C design can influence human performance by driving how plant personnel carry out work and respond to events within a nuclear power plant As a result human system interfaces HSIs for plant operators as well as the maintenance and testing of the I C system cannot be designed by isolated disciplines The focus of this publication is to integrate knowledge from the disciplines of human factors engineering HFE and I C to emphasize an interdisciplinary approach for the design of better HSIs and consequently improved human performance in nuclear power plants This is accomplished by practical explanations of the HFE processes and corresponding outputs that inform the I C development More specifically the publication addresses issues in the design process where collaboration between HFE I C and other important disciplines and stakeholders is paramount and identifies key tools and tasks for exchanging inputs and outputs between different design disciplines particularly I C and HFE The practical information provided in this publication is intended to support Member States capabilities to improve their approach to I C through the consideration of HFE
