**A Review of the Quality and Safety of Irradiated Food** James H Cox (Jr), AIR FORCE INST OF TECH WRIGHT-PATTERSON AFB OH., 1987 This monograph will describe the

food irradiation process and summarizing its historical development as a way to prolong the shelf life of food and prevent the spread of foodborne illness. It will also examine the known effects of irradiation on food quality. Including a presentation of the effect of irradiation on the flavor, appearance, and smell of food. The nutritional adequacy of irradiated foods and several improvements in some foods caused by irradiation will also be discussed. Finally, a discussion of the safety issues associated with the process and its products. The safety of irradiated foods is an issue of growing concern to the American public. While irradiation shows great potential for reducing foodborne illness, the formation of radiolytic products, the physical dangers of radiation, and the possibility of cancer or genetic mutation worries many people.

**Food Irradiation Research and Technology** Christopher H. Sommers, Xu Tong Fan, 2008-02-28. The benefits of food irradiation to the public health have been described extensively by organizations such as the Centers for Disease Control and Prevention in the U.S. and the World Health Organization. The American Medical Association and the American Dietetic Association have both endorsed the irradiation process. Yet the potential health benefits of irradiation are unknown to many consumers and food industry representatives who are wary of irradiated foods due to myth information from consumer advocate groups. *Food Irradiation Research and Technology* presents the latest scientific findings of researchers at the leading edge of food irradiation. In this book, experts from industry, government, and academia define the basic principles of irradiation and the public health benefits of irradiation, describe advances in irradiation technology, detection technology, and radiation dosimetry, review the regulations pertaining to food irradiation, and the toxicological safety data. It provides food industry representatives and public health officials with effective methodologies to educate consumers and counteract misinformation, review recent advances in the irradiation of meat and poultry, fruits and vegetables, seafood, and the use of irradiation as a phytosanitary treatment. *Food Irradiation Research and Technology* appeals to a broad readership: industry food scientists involved in the processing of meat and fish, fruits and vegetables, food microbiologists, and radiation processing specialists; government and industry representatives involved in the import and export of food commodities; and industry, local, and state officials involved in educational efforts regarding food irradiation. Food scientists and technologists share a responsibility to ensure that educational materials provided to the public regarding food safety and processing technologies are based on sound science and fact, not on misconceptions. *Food Irradiation Research and Technology* meets that goal.

**Report on the Safety and Wholesomeness of Irradiated Foods** Great Britain. Advisory Committee on Irradiated and Novel Foods, 1986.

*Food Irradiation Technologies* Isabel C. F. R. Ferreira, Amílcar L. Antonio, Sandra Cabo Verde, 2017-12-19. Food preservation by irradiation is gaining recognition as a technology that is more environmentally benign than other current processes such as post-harvest chemical fumigation. It has less impact on thermally sensitive compounds than thermal decontamination technologies such as hot water or steam, and the technology is more accessible and cheaper. As the technical and economic feasibility, as well as the level of consumer acceptance, have increased, its use has been growing fast. International

organizations including the Food and Agriculture Organization of the United Nations FAO the International Atomic Energy Agency IAEA and the World Health Organization WHO have coordinated and worked with others to develop norms and review the safety and efficacy of irradiated foods Commended in the Foreword by Carl Blackburn Food Irradiation Specialist Joint FAO IAEA Division of Nuclear Techniques in Food and Agriculture this book makes a strong case for the use of this overwhelmingly safe food processing technique This comprehensive book is a useful reference for food technologists analytical chemists and food processing professionals covering all aspects of gamma electron beam and X ray food irradiation its impact on food matrices and microorganisms legislation and market aspects It is the first book to cover control and structural analysis in food irradiation and being written by leading experts in the field addresses the current global best practices It contains updated information about the commercial application of food irradiation technology especially regarding the type of radiation based on food classes and covers dosimetry radiation chemistry food decontamination food quarantine food processing and food sterilization *Irradiated Foods (2007)* , **Food Irradiation** Dermot James Hayes,1995 When it comes to our food supply we often ask how fresh is fresh or how safe is fresh food Refrigeration freezing heating modified atmosphere packaging and chemical preservatives are the processing techniques used today to control contamination in our food supply Yet as consumers we are bombarded with media reports regarding the contamination of meats and vegetables Food irradiation is a technology that holds much promise in greatly increasing the safety of our food supply Food Irradiation A Sourcebook provides information on the technology in a user friendly manner while keeping faithful to factual accuracy Consumers nonscientists in the food industry journalists government officials extension specialists and anyone interested in how radiation technology can be utilized to improve food safety and shelf life will benefit from this timely resource **Food Irradiation** United States.
