This Mortal Coil Fay Bound Alberti,2016-04-08 To many people the idea that the body has its own history might sound faintly ridiculous The body and its experiences are usually seen as something that we share with people from the past Like human nature it represents the unchanging in a changing world Bodies just are But the body does have a history The way that it moves feels breathes and engages with the world has been viewed very differently across times and cultures For centuries we were believed to be composed of souls that were part of the body and inseparable from it Now we exist in our heads and our bodies have become the vessels for that uncertain and elusive thing we call our true selves The way we understand the material structure of the body has also changed radically over the centuries From the bones to the skin from the senses to the organs of sexual reproduction every part of the body has an ever changing history dependent on time culture and place This Mortal Coil is an exploration of that history Peeling away our assumptions about the unchanging nature of the human body Fay Bound Alberti takes it apart in order to put it back anew telling the cultural history of our key organs and systems from the inside out from blood to guts brains to sex organs The understanding of the modern body she reveals in the process is far removed from the eternal or timeless object of common assumption In fact she argues its roots go back no further than the sixteenth century at the earliest and it has only truly existed in its current form since the nineteenth century

Pharmaceutical and Medical Device Safety Sonia Macleod,Sweta Chakraborty,2019-02-21 This book examines how regulatory and liability mechanisms have impacted upon product safety decisions in the pharmaceutical and medical devices sectors in Europe the USA and

beyond since the 1950s Thirty five case studies illustrate the interplay between the regulatory regimes and litigation Observations from medical practice have been the overwhelming means of identifying post marketing safety issues Drug and device safety decisions have increasingly been taken by public regulators and companies within the framework of the comprehensive regulatory structure that has developed since the 1960s In general product liability cases have not identified or defined safety issues and function merely as compensation mechanisms This is unsurprising as the thresholds for these two systems differ considerably regulatory action can be triggered by the possibility that a product might be harmful whereas establishing liability in litigation requires proving that the product was actually harmful As litigation normally post dates regulatory implementation the private enforcement of public law has generally not occurred in these sectors This has profound implications for the design of sectoral regulatory and liability regimes including associated features such as extended liability law class actions and contingency fees This book forms a major contribution to the academic debate on the comparative utility of regulatory and liability systems on public versus private enforcement and on mechanisms of behaviour control

Mass Torts in Europe Willem H. van Boom, Gerhard Wagner, 2014-10-14 in recent years there has been a growing interest in the legal aspects of mass torts in Europe Both academics legislatures courts and policymakers throughout the whole of Europe have been struggling with the challenges that such massification of private law relationships poses both in and outside of tort law The subject moves between the law of civil procedure substantive tort law access to justice debates and regulatory frameworks for mass disputes This volume offers both a kaleidoscopic review of real life key cases of mass tort and an in depth reflection on the broader implications of mass tort in Europe Thus the challenges posed by mass torts are explored mapped and analysed
