Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin, 1997-07-31

The Encyclopaedia fills a gap in both the history of science and in cultural studies. Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works. The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures' science. Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas. The Western academic divisions of science, technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected. This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity. The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today. There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does.

xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa.

*Cosmopolitan Cultures and Oceanic Thought* Dilip M Menon, Nishat Zaidi, 2023-03-29

This book imagines the ocean as central to understanding the world and its connections in history, literature and the social sciences. Introducing the central conceptual category of ocean as method, it analyzes the histories of movement and traversing across connected spaces of water and land sedimented in literary texts, folklore, local histories, autobiographies, music and performance. It explores the constant flow of people, material and ideologies across the waters and how they make their presence felt in a cosmopolitan thinking of the connections of the world. Going beyond violent histories of slavery and indenture that generate global connections, it tracks the movements of sailors, boatmen, religious teachers, merchants and adventurers. The essays in this volume summon up this miscegenated history in which land and water are ever linked. A significant rethinking of world history, this volume will be of great interest to scholars and researchers of history, especially connected history and maritime history, literature and Global South studies.
