Attention is given to the ways in which needs for explanation are generated how the strange new entities of science from genes to electrons are created through talk and action how knowledge is transformed to become explainable and how demonstrations link explanation and reality Different styles of explanation are illustrated from the teller of tales to those who ask students to say it my way Explaining Science in the Classroom is a new and exciting departure in science education It brings together science educators and specialists in discourse and communication to reach a new synthesis of ideas The book offers science teachers very practical help and insight
