Salmon of the Pacific Northwest Anthony Netboy, 1958 **Upstream** National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Protection and Management of Pacific Northwest Anadromous Salmonids, 1996-07-17 The importance of salmon to the Pacific Northwest economic recreational symbolic is enormous Generations ago salmon were abundant from central California through Idaho Oregon and Washington to British Columbia and Alaska Now they have disappeared from about 40 percent of their historical range The decline in salmon numbers has been lamented for at least 100 years but the issue has become more widespread and acute recently The Endangered Species Act has been invoked federal laws have been passed and lawsuits have been filed More than 1 billion has been spent to improve salmon runs and still the populations decline In this new volume a committee with diverse expertise explores the complications and conflicts surrounding the salmon problem starting with available data on the status of salmon populations and an illustrative case study from Washington state s Willapa Bay The book offers specific recommendations for salmon rehabilitation that take into account the key role played by genetic variability in salmon survival and the urgent need for habitat protection and management of fishing The committee presents a comprehensive discussion of the salmon problem with a wealth of informative graphs and charts and the right amount of historical perspective to clarify today s issues including Salmon biology and geography their life s journey from fresh waters to the sea and back again to spawn and their interaction with ecosystems along the way The impacts of human activities grazing damming timber agriculture and population and economic growth Included is a case study of Washington state s Elwha River dam removal project Values attitudes and the conflicting desires for short term economic gain and long term environmental health The committee traces the roots of the salmon problem to the extractive philosophy characterizing management of land and water in the West The impact of hatcheries which were introduced to build fish stocks but which have actually harmed the genetic variability that wild stocks need to survive This book offers something for everyone with an interest in the salmon issue policymakers and regulators in the United States and Canada environmental scientists environmental advocates natural resource managers commercial tribal and recreational fishers and concerned residents of the Pacific Northwest *The Northwest Salmon Crisis* Joseph Cone, Sandy Ridlington, 1996 An introduction to the problem of salmon extinction is followed by historical and contemporary views on issues such as Columbia River fisheries artificial propagation of salmon and fishing regulations Subsequent sections address the problems caused by various technologies and bureaucratic actions Native American involvement in the issue both historical and contemporary and what should be done to prevent wild salmon extinction c Book News Inc **Pacific Salmon & their Ecosystems** Deanna J. Salmon in the Pacific Northwest ,1994 **The Fish in the Forest** Dale Stokes,2014-06-12 The Fish in the Forest is an elegantly written beautifully illustrated exploration of the complex web of relationships between the salmon of the Pacific Northwest and the surrounding ecosystem Dale Stokes shows how nearly all aspects of this fragile ecosystem from streambeds to treetops from sea urchins to orcas to bears from rain forests to kelp forests are intimately linked with the biology of the Pacific salmon Illustrated with 70 stunning color photographs by Doc White The Fish in the Forest demonstrates how the cycling of nutrients between the ocean and the land mediated by the life and death of the salmon is not only key to understanding the landscape of the north Pacific coast but is also a powerful metaphor for all of life on earth

Congress. Senate. Committee on Environment and Public Works. Subcommittee on Drinking Water, Fisheries, and Wildlife,1997 Assessment of the Risk of Invasion of National Forest Streams in the Pacific Northwest by Farmed Atlantic

Salmon Peter A. Bisson, 2006 This report describes the evidence for invasion of Pacific Northwest streams by Atlantic salmon *Salmo salar* that have escaped from marine salmon farms and assesses the potential impact of farmed salmon invasion on native fishes inhabiting streams on National Forest System lands The current risk to streams on National Forest lands in the Pacific Northwest from Atlantic salmon invasions appears to be low and is limited to a few areas in northwest Washington and southeast Alaska However long term risks may be substantial if fish continue to escape from marine rearing pens or freshwater hatcheries The two greatest threats appear to be that 1 Atlantic salmon could transmit a serious disease or parasite to native fishes and 2 escaped salmon could eventually adapt to local conditions leading to self sustaining populations If Atlantic salmon populations are eventually established this species preference for swiftly flowing stream habitats could facilitate competition with currently at risk species such as steelhead *Oncorhynchus mykiss* This could result in a pattern of expansion similar to that observed in other nonnative aquatic plants and animals in which a prolonged early colonization period is followed by a rapid phase of exponential growth as breeding populations adapt to local conditions
