Salmonid Ecosystems Of The North Pacific:

Pacific Salmon Life Histories Cornelis Groot, L. Margolis, 1991 Pacific salmon are an important biological and economic resource of countries of the North Pacific rim. They are also a unique group of fish possessing unusually complex life histories. There are seven species of Pacific salmon, five occurring on both the North American and Asian continents: sockeye, pink, chum, chinook, and coho, and two, masu and amago, only in Asia. The life cycle of the Pacific salmon begins in the autumn when the adult female deposits eggs that are fertilized in gravel beds in rivers or lakes. The young emerge from the gravel the following spring and will either migrate immediately to salt water or spend one or more years in a river or lake before migrating. Migrations in the ocean are extensive during the feeding and growing phase, covering thousands of kilometres. After one or more years, the maturing adults find their way back to their home river, returning to their ancestral breeding grounds to spawn. They die after spawning, and the eggs in the gravel signify a new cycle. Upon this theme, Pacific salmon have developed many variations, both between as well as within species. *Pacific Salmon Life Histories* provides detailed descriptions of the different life phases through which each of the seven species passes. Each chapter is written by a scientist who has spent years studying and observing a particular species of salmon. Some of the topics covered are geographic distribution, transplants, freshwater life, ocean life, development, growth, feeding, diet, migration, and spawning behaviour. The text is richly supplemented by numerous maps, illustrations, colour plates, and tables, and there is a detailed general index as well as a useful geographical index.

Pacific Salmon & their Ecosystems Deanna J. Stouder, Peter A. Bisson, Robert J. Naiman, 2012-02-02 The symposium *Pacific Salmon and Their Ecosystems: Status and Future Options* and this book resulted from initial efforts in 1992 by Robert J. Naiman and Deanna J. Stouder to examine the problem of declining Pacific salmon (*Oncorhynchus* spp.). Our primary goal was to determine informational gaps. As we explored different scientific sources, state, provincial, and federal agencies, as well as non-profit and fishing organizations, we found that the information existed but was not being communicated across institutional and organizational boundaries. At this juncture, we decided to create a steering committee and plan a symposium to bring together researchers, managers, and resource users. The steering committee consisted of members from state and federal agencies, non-profit organizations, and private industry (see Acknowledgments for names and affiliations). In February 1993, we met at the University of Washington in Seattle to begin planning the symposium. The steering committee spent the next four months developing the conceptual framework for the symposium and the subsequent book. Our objectives were to accomplish the following: 1) assess changes in anadromous Pacific Northwest salmonid populations; 2) examine factors responsible for those changes; and 3) identify options available to society to restore Pacific salmon in the Northwest. The symposium on Pacific Salmon was held in Seattle, Washington, January 10-12, 1994. Four hundred and thirty-five people listened to oral presentations and examined more than forty posters over two and a half days. We made a deliberate attempt to draw in speakers and attendees from outside the Pacific Northwest.

Climate Change and Northern Fish Populations National Research Council Canada, Canada. Department of Fisheries and Oceans, 1995 These documents summarize some of the recent studies of the relationships among climate the aquatic environment and the dynamics of fish populations The studies are mostly from the North Pacific ocean but there are reports of investigations from the North Atlantic Ocean and from fresh water Various papers include numerous examples of the relationships between fish abundance trends and the environment **Mechanisms of Migration in Fishes** James D. McCleave, 2013-03-13 The last major synthesis of our knowledge of fish migration and the underlying transport and guidance phenomena both physical and biological was *Fish Migration* published 16 years ago by F R Harden Jones 1968 That synthesis was based largely upon what could be gleaned by classical fishery biology techniques such as tagging and recapture studies commercial fishing statistics and netting and trapping studies Despite the fact that Harden Jones also provided with a good deal of thought and speculation a theoretical basis for studying the various aspects of fish migration and migratory orientation progress in this field has been with a few exceptions piecemeal and more disjointed than might have been expected Thus we welcomed the approach from the NATO Marine Sciences Programme Panel and the encouragement from F R Harden Jones to develop a proposal for and ultimately to organize a NATO Advanced Research Institute ARI on mechanisms of fish migration Substantial progress had been made with descriptive analytical and predictive approaches to fish migration since the appearance of *Fish Migration* Both because of the progress and the often conflicting results of research we felt that the time was again right and the effort justified to synthesize and to critically assess our knowledge Our ultimate aim was to identify the gains and shortcomings and to develop testable hypotheses for the next decade or two

The Behavior and Ecology of Pacific Salmon and Trout Thomas P. Quinn, 2011-11-01 Few subjects have generated as much emotional dialogue around conflicting scientific and policy agendas as the protection and management of Pacific salmon resources In this major new work esteemed fisheries expert Thomas Quinn distills from the vast scientific literature the essential information on the behaviour and ecology of Pacific salmon including steelhead and cutthroat trout Unlike other books that examine only selected life stages habitats or species this book richly illustrated with beautiful photographs and

original artwork thoroughly covers the complete life cycle emphasizing common themes and differences among the various species of salmon. Representing the range of species and geographic regions, Quinn includes examples from classic studies by pioneers of salmon biology and from the most current research in order to illustrate the important features of salmon life history and behaviour and the complex physical biological and human factors that affect them. He introduces salmon and trout as a group with a brief description of each species and compares them to other fishes. The book then follows salmon on their amazing homeward migration from the open ocean through the complex coastal waters upstream to the precise location where they were spawned years earlier. The Behavior and Ecology of Pacific Salmon and Trout explains the patterns of mate choice, the competition for nest sites and the fate of the salmon after their death. It describes the lives of offspring during the months they spend incubating in gravel, growing in fresh water and migrating out to sea to mature. Quinn emphasizes the importance of salmon to humans and natural ecosystems and the need to integrate sound biology into conservation efforts. This thorough up to date survey should be on the shelf of everyone with a professional or personal interest in Pacific salmon and trout. Written in a technically accurate but engaging style, it will appeal to a wide range of readers including students, anglers, biologists, conservationists, legislators and armchair naturalists.

T. Hanfman, 1990 **Fishery Bulletin**, 2002 *Developing a Research and Restoration Plan for Arctic-Yukon-Kuskokwim (Western Alaska) Salmon* National Research Council, Division on Earth and Life Studies, Polar Research Board, Board on Environmental Studies and Toxicology, Committee on Review of Arctic-Yukon-Kuskokwim (Western Alaska) Research and Restoration Plan for Salmon, 2005-07-06. Recent declines in the abundance of salmon in the Arctic Yukon Kuskokwim (AYK) region of western Alaska have created hardships for the people and communities who depend on this resource. In 2002 the AYK Sustainable Salmon Initiative (SSI) was created to undertake research to understand the reasons for this decline and to help support sustainable management in the region. This report makes recommendations for developing the research that the AYK SSI science plan should be based on and relates the development of a restoration plan to the results of that research.

Genetic Conservation of Salmonid Fishes Joseph G. Cloud, Gary H. Thorgaard, 2012-12-06. As the human population increases and nations become more industrialized, the habitat and water quality required for the survival of fish continues to decline. In addition to these environmental factors, fish populations are directly or potentially affected by harvesting, enhancement programs and introgression with hatchery propagated or transgenic fish. To our knowledge, no other scientific meeting has been assembled to consider the breadth of the problem, to review the technology that is presently available for the preservation of the germ plasm of salmonid stocks and to identify the scientific advances that are required to overcome the problems. Because many salmonids have spawning grounds within the confines of a specific region or county but will spend a large portion of their life cycle within the territorial waters of other countries or in the open ocean, the preservation of unique genes or gene pools in these animals requires international cooperation. This scientific meeting has provided a

forum in which to discuss the problems evaluate the present methods or technology for addressing the problems and suggest new directions or innovations that need to be implemented During this meeting we limited our discussion to salmonid fishes However the general conclusions about the factors that affect the population dynamics of fish stocks and the technical aspects concerning the preservation of germ plasm will be applicable to other fish species **Proceedings of the Eleventh U.S.-Japan Meeting on Aquaculture** Carl J.
