Science and Polity in France Charles Coulston Gillispie, 2014-10-20 From the 1770s through the 1820s the French scientific community predominated in the world to a degree that no other scientific establishment did in any period prior to the Second World War In his classic *Science and Polity in France The End of the Old Regime* Charles Gillispie analyzed the cultural political and technical factors that encouraged scientific productivity on the eve of the Revolution In the present monumental and elegantly written sequel to that work which Princeton is reissuing concurrently he examines how the revolutionary and Napoleonic context contributed to modernization both of politics and science In politics argues Gillispie the central feature of this modernization was conversion of subjects of a monarchy into citizens of a republic in direct contact with a state enormously augmented in power To the scientific community attainment of professional status was what citizenship was to all Frenchmen in the republic proper namely the license to self governance and dignity within the respective contexts Revolutionary circumstances set up a resonance between politics and science since practitioners of both were future oriented in their outlook and scornful of the past Among the creations of the First French Republic were institutions providing the earliest higher education in science From them emerged rigorously trained people who constituted the founding generation in the disciplines of mathematical physics positivistic biology and clinical medicine That scientists were able to achieve their ends was owing to the expertise they provided the revolutionary and imperial authorities in education medicine warfare empire building and industrial technology

The Bourgeois Revolution in France, 1789-1815 Henry Heller, 2006 In the last generation the classic Marxist interpretation of the French Revolution has been challenged by the so called revisionist school The Marxist view that the Revolution was a bourgeois and capitalist revolution has been questioned by Anglo Saxon revisionists like Alfred Cobban and William Doyle as well as a French school of criticism headed by Fran ois Furet Today revisionism is the dominant interpretation of the Revolution both in the academic world and among the educated public Against this conception this book reasserts the view that the Revolution the capital event of the modern age was indeed a capitalist and bourgeois revolution Based on an analysis of the latest historical scholarship as well as on knowledge of Marxist theories of the

transition from feudalism to capitalism the work confutes the main arguments and contentions of the revisionist school while laying out a narrative of the causes and unfolding of the Revolution from the eighteenth century to the Napoleonic Age

The Technical Corps Between France and Italy, 1750-1814 Lorenzo Cuccoli, 2024-10-04 This book provides the first comprehensive study of the technical corps during the Napoleonic Era both in France and in Italy These corps which possessed advanced schooling and nurtured meritocratic practices even in the Ancien Regime came to the forefront with the French Revolution due to the increase in prestige of both scientists and the military Notwithstanding the key roles played by well known figures such as Lazare Carnot and Napoleon Bonaparte the historiography has not fully explored either the culture that produced them or the impact this had in France and in Napoleonic Europe or their far reaching legacy The modern paradigms of technocracy and meritocracy in fact have their origin in these corps

Paris Savant Bruno Belhoste, 2019-05-17

Novelist Honor de Balzac was the first to use the phrase Paris savant to refer to the dynamic Parisian scientific and intellectual community of the late 18th century This book discusses how the Parisian scientific community came into its important place in the French Enlightenment focusing on the Academy of Sciences

Scientific Institutions and Practice in

France and Britain, c.1700–c.1870 Maurice Crosland, 2023-05-31 This second collection of studies by Maurice Crosland has as a first theme the differences in the style and organisation of scientific activity in Britain and France in the 18th and early 19th centuries. Science was more closely controlled in France, notably by the Paris Academy of Sciences and the work of provincial amateurs, much less prominent than in Britain. The most dramatic change in any branch of science during this period was in chemistry, largely through the work of Lavoisier and his colleagues; the focus of several articles here and the dominance of this group caused considerable resentment outside France, not least by Joseph Priestley. The issue of authority in science emerges again within France under the rule of Napoleon in a study of the exceptional power exercised by the great mathematician Laplace both in theoretical science and in academic politics. This exploration of organisation and power is complemented by a comparative study of the practice of early physics and chemistry and their different reliance on laboratories. This raises the question of whether chemistry provided a model for later experimental work in other sciences, both through the construction of pioneering laboratories and in establishing early schools of research.

The World as We Know It Peter Dear, 2025-10-21 From the award-winning author of *Revolutionizing the Sciences*, a monumental historical account of how we came to see the world through the lens of science. Science is the basis of our assumptions about ourselves and our world, from ideas about our evolutionary past to our conceptions of the vast expanses of space and the smallest particles of matter. In this panoramic book, acclaimed historian of science Peter Dear uncovers the roots of such beliefs, revealing how they constitute a natural philosophy that has been developed and refined over the course of centuries and how the world as we have come to know it was by no means inevitable. In a sweeping, multifaceted narrative, Dear describes some of the most breathtaking accomplishments in the advance of human knowledge, such as Isaac Newton's laws of motion and gravitation, Carl Linnaeus's taxonomy, Antoine Lavoisier's new chemistry, Charles Darwin's theory of evolution, and Albert Einstein's theories of relativity. Challenging the notion that science is only about making discoveries, he shows how our world has been formed by people, institutions, and cultural assumptions, giving rise to disciplines ranging from biology and astrophysics to electromagnetism and the social sciences. Taking readers from the early eighteenth century to today, *The World as We Know It* reveals how our ideas about our place in the universe were bequeathed to us by individuals, cultures, and a curiosity that knows no bounds.

Materials in Eighteenth-century Science Ursula Klein, Wolfgang Lefèvre, 2007 In this history of materials, the authors link chemical science with chemical technology, challenging our current understandings of objects in the history of science and the distinction between scientific and technological objects. They further show that chemists' experimental production and understanding of materials changed over time, first in the decades around 1700 and then around 1830, when mundane materials became clearly distinguished from true chemical substances.
