**Road to D-Day** Greg Baughen,2023-07-31 By the summer of 1943 the Third Reich s fate seemed sealed The combined might of Britain and the Commonwealth nations the United States and the Soviet Union had made a Germany victory impossible All that remained to decide was how the Allies should complete their victory Would strategic bombing decide the outcome or would ground and air forces working together play the more significant role Greg Baughen follows the air and land battles in Italy France and Germany between 1943 and early 1944 as well as the equally bitter battles behind the scenes as army and air commanders debated and argued over how the war should be won He charts the trials tribulations and successes of the bomber offensive and assesses whether in the final analysis the bomber strategy shortened or lengthened the war He explains how army air support went backwards after the successes of the Desert Air Force and how this led to a failure to support the troops landing on the D Day beaches in Normandy He also describes the subsequent revival of tactical air

support and how it went on to play a key role in the subsequent campaigns but questions whether Eisenhower Montgomery or Tedder ever fully understood how to make best use of the massive aerial forces available to them Drawing on archive documents and accounts written at the time the author tackles some fundamental defense issues Was RAF independence a benefit or a hindrance to the Allied cause To what extent was the War Office to blame for shortcomings in army air support Did Britain understand the way the methods for waging war were evolving in the twentieth century He takes a look at how the Air Ministry was interpreting the lessons being learned during the war Were the defense policies of the twenties and thirties still valid Had they ever been valid This then is the story of the decisions and actions that the RAF followed in the months leading up to D Day and how air operations evolved in the subsequent campaign

Winning the Next War Stephen Peter Rosen,2018-07-05 How and when do military innovations take place Do they proceed differently during times of peace and times of war In *Winning the Next War* Stephen Peter Rosen argues that armies and navies are not forever doomed to fight the last war Rather they are able to respond to shifts in the international strategic situation He also discusses the changing relationship between the civilian innovator and the military bureaucrat In peacetime Rosen finds innovation has been the product of analysis and the politics of military promotion in a process that has slowly but successfully built military capabilities critical to American military success In wartime by contrast innovation has been constrained by the fog of war and the urgency of combat needs Rosen draws his principal evidence from U S military policy between 1905 and 1960 though he also discusses the British army s experience with the battle tank during World War I
