The Future Knowledge Compendium Peter Ellyard, 2023-03-03 THRIVING IN THE 21ST CENTURY Humans have a unique capability to both understand their situation in the world and to envision and act to realise their aspirations in the emerging world And most of us would welcome knowing how we can become ever more skilful at both understanding and shaping the future of our emerging world so that we can thrive in it The 21st century is very different from the 20th century Globalisation the greatest economic prosperity uplifting machine humanity has ever invented and mass education are combining to sweep humanity into an emerging interdependent global village It is creating a global educated middle class that will number 5 billion in 2030 In this emerging world a world where our future prosperity will be increasingly based on metaphysical wealth on what we know 20th century nation first competitive win lose mindsets and agendas can no longer work These now yesteryear mindsets will instead undermine our best endeavours including making our future ever more climate and pandemic safe Humanity is now beginning to learn that it now has no option but to adopt planet first collaborative win win values and mindsets if it wishes to shape our emerging global village so that it can become liveable for all ever more prosperous harmonious inclusive sustainable healthy and secure Meeting these challenges successfully will require that humanity innovates for itself a new future knowledge curriculum so that it can economically thrive in a sustainable and humane manner Peter Ellyard has asked the question what would be the contents of such a curriculum In *The Future Knowledge Compendium A Curriculum for Thriving in the 21st Century* he has sought to answer this question

The De Gruyter Handbook of Automated Futures Viki Fors, Martin Berg, Meike Brodersen, 2024-09-23 How does automation affect us our environment and our imaginations? What actions should we take in response to automation? Beyond grand narratives and technology driven visions of the future what more can automation offer? With these questions in mind The De Gruyter Handbook of Automated Futures provides a framework for thinking about and implementing automation differently. It consolidates automated futures as an inter and transdisciplinary research field embedding the imaginaries interactions and impacts of automation technology within their social historical societal cultural and political contexts. Promoting a critical yet constructive and engaging agenda the handbook invites readers to collaborate with rather than resist automation agendas. It does so by pushing the agenda for social science humanities and design beyond merely assessing and evaluating existing technologies. Instead the handbook demonstrates how the humanities and social sciences are essential to the design and governance of sustainable sociotechnical systems. Methodologically the handbook is underpinned by a pedagogical approach to staging co learning and co creation of automated futures with rather than simply for people. In this way the handbook encourages readers to explore new and alternative modes of research fostering a deeper engagement with the evolving landscape of automation.
