explores this phenomenon as well as the advantages and disadvantages of using 2D materials. Special attention is directed toward the identification of the most effective hybrid 2D materials in infrared and terahertz detectors as well as future trends. Written by one of the world's leading researchers in the field of IR optoelectronics, this book will be a must read for researchers and graduate students in photodetectors and related fields. Features: Offers a comprehensive overview of the different types of 2D materials used in fabrication of IR and THz detectors and includes their advantages/disadvantages. The first book to compare new detectors to a wide family of common commercially available detectors that use traditional materials.
