**Looking at Animals in Human History** Linda Kalof, 2007-08-15 From the first cave paintings to Britta Jaschinski's provocative animal photography, it seems we have been describing and portraying animals in some form or another for as long as we have been human. This book provides a broad historical overview of our representations of animals from prehistory to postmodernity and how those representations have altered with changing social conditions. Taking in a wide range of visual and textual materials, Linda Kalof unearths many surprising and revealing examples of our depictions of animals. She also examines animals in a broad sweep of literature, narrative and criticism from Pliny the Elder's *Natural History* to Donna Haraway's writings on animal-human-machine interaction and from accounts of the Black Plague and histories of the domestic animal and zoos to the ways that animal stereotypes have been applied to people to highlight hierarchies of gender, race and class. Well researched and scholarly yet very accessible, this book is a significant contribution to the human-animal story. Featuring more than 60 images, *Looking at Animals in Human History* brings together a wealth of information that will appeal to the wide audience interested in animals as well as to specialists in many disciplines. Linda Kalof is professor of sociology at Michigan State University. Her books include *The Earthscan Reader in Environmental Values* and *The Animals Reader: The Essential Classic and Contemporary Writings*.

McGhee, Jr., 2011-11-04 An analysis of convergent evolution from molecules to ecosystems demonstrating the limited number of evolutionary pathways available to life Charles Darwin famously concluded *On the Origin of Species* with a vision of endless forms most beautiful continually evolving More than 150 years later many evolutionary biologists see not endless forms but the same or very similar forms evolving repeatedly in many independent species lineages A porpoise s fishlike fins for example are not inherited from fish ancestors but are independently derived convergent traits In this book George McGhee describes the ubiquity of the phenomenon of convergent evolution and connects it directly to the concept of evolutionary constraint the idea that the number of evolutionary pathways available to life are not endless but quite limited Convergent evolution occurs on all levels from tiny organic molecules to entire ecosystems of species McGhee demonstrates its ubiquity in animals both herbivore and carnivore in plants in ecosystems in molecules including DNA proteins and enzymes and even in minds describing problem solving behavior and group behavior as the products of convergence For each species example he provides an abbreviated list of the major nodes in its phylogenetic classification allowing the reader to see the evolutionary relationship of a group of species that have independently evolved a similar trait by convergent evolution McGhee analyzes the role of functional and developmental constraints in producing convergent evolution and

considers the scientific and philosophical implications of convergent evolution for the predictability of the evolutionary process     Sea-Life Learning Centers ,1995-09-01 As the school year comes to a close many children are preparing for a summer trip to the sea Help them out with a sea themed classroom unit With art activities riddles story starters and recipes this packet will keep students engaged in learning even as their minds wander to the sea
