Smith,2010-09-30 Our ability to treat common bacterial infections with antibiotics goes back only 65 years However the authors of this report make it clear that sustaining a supply of effective and affordable antibiotics cannot be without changes to the incentives facing patients physicians hospitals insurers and pharmaceutical manufacturers In fact increasing resistance to these drugs is already exacting a terrible price Every day in the United States approximately 172 men women and children die from infections caused by antibiotic resistant bacteria in hospitals alone Beyond those deaths antibiotic resistance is costing billions of dollars through prolonged hospital stays and the need for doctors to resort to ever more costly drugs to use as substitute treatments Extending the Cure presents the problem of antibiotic resistance as a conflict between individual decision makers and their short term interest and the interest of society as a whole in both present and future The effort that doctors make to please each patient by prescribing a drug when it might not be properly indicated poor monitoring of discharged patients to ensure that they do not transmit drug resistant pathogens to other persons excesses in the marketing of new antibiotics and the broad overuse of antibiotics all contribute to the development and spread of antibiotic resistant bacteria The book explores a range of policy options that would encourage patients health care providers and managed care organizations to serve as more responsible stewards of existing antibiotics as well as proposals that would give pharmaceutical firms greater incentives to develop new antibiotics and avoid overselling If the problem continues unaddressed antibiotic resistance has the potential to derail the health care system and return us to a world where people of all ages routinely die from simple infections As a basis for future research and a spur to a critically important dialogue Extending the Cure is a fundamental first step in addressing this public health crisis The Extending the Cure project is funded in part by the Robert Wood Johnson Foundation through its Pioneer Portfolio **Infection Prevention and Control in Healthcare, Part I: Facility Planning and Management, An Issue of Infectious Disease Clinics of North America, E-Book** Keith S.  R. van Furth, 2012-12-06 R. VANFURTH Infection is an inseparable part of communal life and infections are more common
 and more severe in hospital communities because the sick are more easily infected than the healthy However even though
 progress in the medical sciences has meant that many more patients suffering from relatively severe diseases can be helped
 at present the use of more sophisticated and complex treatment leads to impairment of the defence mechanisms in more
 patients than was the case ten to twenty years ago and these patients are also more prone to develop an infection Two
 questions are particularly relevant in this context 1 Under what conditions do hospital infections occur Defects of host
 defence mechanisms are of great importance in this respect Such defects can be due to the disease or to the treatment given
 to the patient 2 Which of the host defence mechanisms can be affected by a stay in the hospital Among the factors involved in
 the host defence against infections Table I a number are especially important in this respect For instance venepuncture
 indwelling catheters and surgery all cause a breach in the surface structures Anaesthesia causes temporary impairment of
 mechanical factors Vascularization may be defective especially in the aged and patients with diabetes mellitus and this may
 complicate the healing of wounds in the skin and mucous membranes after surgery *A TEXT BOOK ON PATIENT CARE*
