Managing Martians:

Managing Martians Donna Shirley, 2010-06-09 Donna Shirley's 35 year career as an aerospace engineer reached a jubilant pinnacle in July 1997 when Sojourner the solar powered self guided microwave oven sized rover was seen exploring the Martian landscape in Pathfinder's spectacular images from the surface of the red planet The event marked a milestone in space but for Donna Shirley the leader of the mostly male team that designed and built Sojourner and the first woman ever to manage a NASA program it marked a triumph of another kind Managing Martians is Shirley's captivating memoir of a life and career spent reaching for the stars From her seemingly outlandish aspiration at age ten to build aircraft to abandoning high school Home Ec in favor of mechanical drawing and at sixteen becoming a licensed pilot Shirley defied expectations from the beginning In a vivid narrative rich with anecdotes and thrilling turning points Shirley recounts the intense battles she waged to defend her vision and the ingenuity and resourcefulness of her committed team Her moment by cliffhanging moment account of Pathfinder's landing and Sojourner's first tentative foray across the sands of Mars brilliantly captures the fulfillment of a lifelong dream as it heralds a brave new era of space exploration

Lady Astronauts, Lady Engineers, and Naked Ladies Karin Hilck, 2019-07-08 The book Lady Astronauts Lady Engineers and Naked Ladies is a gender history of the American space community and by extension a social history of American society in the twentieth century during the Cold War In order to expand and differentiate the prevalent postwar narrative about gender relations and cultural structures in the United States the book analyzes several different groups of women interacting in different social spaces within the space community It therewith grants insight into the several layers of female participation and agency in the community and the gender and race based obstacles and hurdles the female prospective astronauts scientists engineers artists administrators writers hostesses secretaries and wives were faced with at NASA and in the space industry In each chapter a different social space within the space community is analyzed The spaces where the women lived and worked are researched from a media individual and institutional angle ultimately revealing the differing gender philosophies communicated in the public sphere and the space community workplaces by government and space community officials While women were publicly encouraged to participate in the American space effort to beat the Soviet Union in the race to the moon women had to deal with gender based barriers which were integral to the structures of the space community just as they were an intrinsic component of all societal structures in the United States in the 1960s The female space workers who were often perceived as disrupters of the prevalent social order in the space community and discriminated by some of their male colleagues and bosses on a personal basis still managed to assert themselves They molded pockets of agency in the space community workspaces without the facilitation of regulations on the part of NASA that might have provided them with easier access or more agency Thus the space community a place of technological innovation was not necessarily also a place of social innovation but a community with a government agency at its center that mainly mirrored the current changing social

order conventions and policies in the 1960s as well as in the 1970s and 1980s Nevertheless the women presented in this book were instrumental in advancing and consolidating the social transformation that happened within the space community and the United States and therefore make intriguing subjects of research Thus this systematic analysis of the connection between gender space and the Cold War adds a new dimension to space history as well as expands the discourse in American history about gender relations and the opportunities of women in the twentieth century *Mars* William

Sheehan,2010-12-08 In this engaging eloquent account of our love affair with the Red Planet Sheehan and O Meara review the history of human fascination with our neighbor in the solar system and look at the prospects for manned space flight to Mars in this new century *Red Rover* Roger Wiens,2013-03-12 Covers the development and construction of the Mars rover Curiosity the most sophisticated vehicle ever sent to the Red Planet **Knowledge Management in the Space Industry**

chapter in an age old quest that encompasses myth false starts red herrings and bizarre coincidences as well as triumphs and heartbreaking failures This book by two journalists with deep experience covering space exploration is the definitive story of how life s discovery has eluded us to date and how it will be found somewhere and sometime this century The Search for Life on Mars is based on more than a hundred interviews with experts at NASA s Jet Propulsion Laboratory and elsewhere who share their insights and stories While it looks back to the early Mars missions such as Viking 1 and 2 the book s focus is on the experiments and revelations from the most recent ones including Curiosity which continues to explore potentially habitable sites where water was once present and the Mars Insight lander which has recorded more than 450 marsquakes since its deployment in late 2018 as well as on the Perseverance and ExoMars rover missions ahead And the book looks forward to the newest most exciting frontier of all the day not too far away when humans will land make the Red Planet their home and look for life directly

The Last of the Great Observatories George H. Rieke,2021-11-09 The Spitzer Space Observatory originally known as the Space Infrared Telescope Facility SIRTf is the last of the four Great Observatories which also include the Hubble Space Telescope the Chandra X ray Observatory and the Compton Gamma Ray Observatory Developed over twenty years and dubbed the Infrared Hubble Spitzer was launched in the summer of 2003 and has since contributed significantly to our understanding of the universe George Rieke played a key role in Spitzer and now relates the story of how that observatory was built and launched into space Telling the story of this single mission within the context of NASA space science over two turbulent decades he describes how after a tortuous political trail to approval Spitzer was started at the peak of NASA s experiment with streamlining and downsizing its mission development process termed faster better cheaper Up to its official start and even afterward Spitzer was significant not merely in terms of its scientific value but because it stood at the center of major changes in space science policy and politics Through interviews with many of the project participants Rieke reconstructs the political and managerial process by which space missions are conceived approved and developed He reveals that by the time Spitzer had been completed a number of mission failures had undermined faith in faster better cheaper and a more conservative approach was imposed Rieke examines in detail the premises behind faster better cheaper their strengths and weaknesses and their ultimate impact within the context of NASA s continuing search for the best way to build future missions Rieke s participant s perspective takes readers inside Congress and NASA to trace the progress of missions prior to the excitement of the launch revealing the enormously complex and often disheartening political process that needs to be negotiated He also shares some of the new observations and discoveries made by Spitzer in just its first year of operation As the only book devoted to the Spitzer mission The Last of the Great Observatories is a story at the nexus of politics and science shedding new light on both spheres as it contemplates the future of mankind s exploration of the universe

Making Time on Mars Zara Mirmalek,2020-04-07 An examination of how the daily work of NASA s Mars Exploration Rovers was organized across three sites on two planets using local Mars time In 2004 mission scientists and

engineers working with NASA's Mars Exploration Rovers MER remotely operated two robots at different sites on Mars for ninety consecutive days. An unusual feature of this successful mission was that it operated on Mars time; the daily work was organized across three sites on two planets according to two Martian time zones. In *Making Time on Mars*, Zara Mirmalek shows that this involved more than a resetting of wristwatches; the team's struggle to synchronize with Mars time involved technological and communication breakdowns, informal workarounds, and extra work to support the technology that was intended to support people. Her account of how NASA created an entirely new temporality for the MER mission offers insights about the assumptions behind the organizational relationship between clock time and work. Mirmalek herself, a member of the mission team, offers an insider's view of the MER workplace and community. She describes the discord among MER's multiple temporalities and examines issues of professional identity that helped shape the experience of working according to Mars time. Considering time and work relationships through a multidisciplinary lens, Mirmalek shows how contemporary and historical human technology relationships inform assumptions about the unalterability of clock time. She argues that the organizational connection between clock time and work, although still operational, is outdated.
