Sovereign Asset-Liability Management - Guidance for Resource-Rich Economies International Monetary Fund, 2014-11-06. Ample natural resource revenues create both opportunities and challenges for a sovereign to transform its natural resources into well managed financial assets. Hence inter temporal smoothing of revenue and consumption investment moves to the center stage of macroeconomic policies. The questions arising from natural resource wealth accumulation are becoming more pressing for many countries given the need to achieve intergenerational equity in a context where commodity prices may not continue their upward trajectory of the past decade. Addressing these questions requires a flexible sovereign asset liability management (SALM) framework that integrates various macroeconomic and financial trade offs with the aim of containing financial risk to the sovereign balance sheet. The framework and policy advice aims to guide policymakers across different institutions in weighing those trade offs. *African Security in the Anthropocene* Hussein Solomon, Jude Cocodia, 2023-03-11. Much has been written on security in Africa: its democratic deficit, poor civil military relations, and myriad conflicts, but these are often treated in isolation from one another. This book takes a different approach as it links all of these issues to the dynamics of the Anthropocene. Penned by African scholars on the continent and in the diaspora, it examines the different challenges not as separate entities but as outcomes of the Anthropocene Age. In this geological epoch, humans have become a global force, unfortunately not necessarily for good. The interaction between humans and the climate, the effects of waste, the impact of pollution on marine and terrestrial ecosystems, the loss of biodiversity, and the change in the chemical composition of the soil, oceans, and atmosphere are key

identifiers of the age of the Anthropocene This has fueled conflict and instability from the vast swathes of the Sahel to Somalia Responding to these issues of insecurity without understanding their inter connectedness and how this relates to the environment can only result in failure From this perspective the current structures in place are inadequate for the task of confronting insecurity at the state and continental levels as represented by the African Union What is needed is a radical reevaluation of Africa s security architecture and approach to security This necessitates pooling sovereignty on a continental and global level It necessitates less state centric responses that include civil society and the business community as equal partners of states in order to collectively confront insecurity in the age of the Anthropocene The authors are academics policy makers and military veterans who have worked in building capacity on the African continent The book is comprehensive in scope strong on theory pragmatic in policy and reflects experience from the field The authors approach makes the book easy interesting and intriguing

The Economics of Natural Resources in Latin America Osmel E. Manzano M., Fernando Navajas, Andrew Powell, 2017-11-15 Revenues from commodities are extremely important for Latin America and the Caribbean yet there is very little literature on the structure of these industries and on the various ways in which the state obtains commodity revenues This book aims to understand the trade off between the degree of taxation overall the profitability of the relevant industry and the amount of investment and subsequent production in the region as well as the relevance of institutions in the performance of the sector This volume focuses on economic efficiency where Latin America stands in terms of the current tax system for the extractive sector how policies have changed in this regard and how policies may be improved The Economics of Natural Resources in Latin America is timely since this new era of lower and volatile prices and possible reconfiguration of investment flows poses a challenge to natural resource tax systems in the world The argument of the book will be made by a collection of papers around the issue of tax efficiency in the region and concludes with chapters on institutions and the role of transparency This book shows that there are varieties of experiences in resource taxation and management of revenues in Latin America that could be used to shape policy interventions in other regions This variety is not only related to their diverse impact on welfare but also on the policy challenges faced by the countries in the region This volume is well suited for those who study and find interest in development economics political economy and public finance as well as policy *Sierra Leone* International Monetary Fund. African Dept., 2016-07-21 This 2016 Article IV Consultation highlights that economic outcomes in Sierra Leone have deteriorated sharply over the past two years Growth declined dramatically from 20.7 percent in 2013 to 4.6 percent in 2014 and further to 2.1 percent in 2015 The budget is under severe pressure Between mid 2014 and end 2015 the Leone depreciated 22 percent against the U S dollar Banking sector vulnerabilities have increased Living standards have also deteriorated significantly since late 2014 The medium term outlook is somewhat positive with growth projected to recover to 4.3 percent in 2016 increasing gradually to about 6.5 percent by 2020 *Natural Resources in Latin America and the Caribbean* Emily Sinnott, John Nash, Augusto de la Torre, 2010-01-01 The question of how to treat commodity production and how to manage recurrent cycles of booms and busts has always been a challenge for policymakers in commodity dependent countries including many in the LAC region These challenges have led to allegations of a commodity curse that retards development in these countries but as of yet there is no consensus as to whether such a curse exists and if so how can negative effects be minimized This book contributes to this debate Much of the report is focused on an examination of specific channels through which commodity dependence may affect the economic and institutional development of countries This includes broadly 4 sets of concerns one set dealing with the direct economic effects of commodity dependence and the implications for long term growth one dealing with the interactions between commodity production and the rents it generates on the one hand and a country's institutions on the other a third dealing with the

macroeconomic challenges of managing the volatility of revenue flows including the distributional implications at the household level posed by cyclicalities of social spending and a final set associated with potential negative environmental and social impacts. The book finds that some commonly accepted negative effects of dependence on natural resources are largely myths while some are realities. But all can be managed and the book draws on the best available information in existing literature as well as original analysis to provide practical advice on how to do so. It also presents descriptive facts and analysis of the impacts in LAC of the recent commodity boom helping the reader understand the implications for the region's development and policies. It should be of great interest to policy makers and analysts as well as laypersons interested in the economics of commodity markets and their role in economic development.
