THE DEFINITIVE BOOK ON THE CHALLENGING NATURE OF PRODUCT MANAGEMENT. When consumers use a product or a service, the experience generates an emotion. For those of us who create products or services, our primary focus is on the customer helping them achieve their desired outcome and attempting to stimulate positive customer emotions. However, in our relentless pursuit of satisfying customer needs, many product people or makers fail to spend enough time reflecting and managing our own emotions. *Managing Product Managing Tension* brings the pressures and unknowns inherent in managing products to the fore and offers practical solutions about how to harness them ultimately turning them to your advantage in order to help develop world class products. [www.marcabraham.com](http://www.marcabraham.com) *Managing the Dynamics of New Product Development Processes* Arie Karniel, Yoram Reich, 2011-07-28. Managing the Dynamics of New Product Development Processes merges product based planning, process modelling, process execution, probabilistic simulations, and simulation based decision making into one framework called the Dynamic new Product Development Process. It provides readers with a means of improving the management of product development through enhanced methods and tools that are specifically tailored to the characteristics and challenges of such processes. It calls for a new Product Lifecycle Management paradigm of utilizing the managed product data for management of the product's development process. Within the framework, the methods used are enhanced or modified to fit the new product development process requirements. Each specific method is exhaustively analyzed from the basic definition of terms through a description of the state of the art of that topic and its limitations. Then the method enhancements are illustrated by many examples and discussed while suggesting further research directions. Finally, the enhanced methods are integrated and demonstrated by a test case. The main two methods described are the design structure matrix (DSM) and Petri nets, which are merged into a novel concept entitled DSM nets. *Managing the Dynamics of New Product Development Processes* provides algorithms, proofs, and practical examples that can be used for general study of the issues concerned. The main concepts presented are applicable to systems engineering and can be used by practitioners of product development processes such as designers, product managers, and process managers as well as developers of process management tools for systems with dynamically changing process structures. *New Products Management* Charles Merle Crawford, C. Anthony Di Benedetto, 2006. *New Products Management* 8e by Crawford and Di Benedetto provides future new product managers, project managers, and team leaders with a comprehensive overview of the new product development process, including how to develop an effective development strategy, manage cross functional teams across the organization.
