Managing Innovation Adoption Majharul Talukder, 2016-05-13 When Innovation is considered one of the key drivers of corporate success why do organisations struggle to implement it Research suggests that innovations fail due to a lack of acceptance by employees therefore an understanding of potential adopters and the factors influencing their decisions is essential Despite much research on adoption of innovation by an organization very little is known about its acceptance by individuals within it Managing Innovation Adoption is about managing technological innovation implementation at work in an effective way by presenting a new theoretical framework Based on the theory of reasoned action TRA the technology acceptance model TAM and other conceptual frameworks Dr Talukder s enhanced model combines factors from existing and original models to create a coherent new model The data collected proves that it can be used to assist a broader understanding of how people in an organization adopt and use innovations As well as contributing to academic knowledge the author s discoveries have practical implications for organizations managers administrators and employees

Proceedings of the International Conference on Business and Management Dynamics 2016: Sustainable economies in the information economy Joy E. Akahome, Michael Twum-Darko, Cyril Ogbokor, Nyaniso Mfusi Zonke, T. Sethibe, R. Steyn, Esme Mohammed, Renier Steyn, L.B. Nguenang, Mamorena Lucia Matsoso, Henry N. Ozuru, Julius Akaba, Patient Rambe, Edem Korku Agbobli, Henri-Vincent Ndjave-Ndjoy, Regis Muchemwa, Andre de la Harpe, Konosoang Mpiti, Ayodeji Afolayan, 2016-12-31 Cape Town South Africa 7 Sept 2016 8 Sept 2016 Theme Sustainable economies in the information economy Purpose To share the quality academic papers presented at the International Conference on Business and Management Dynamics ICBMD held from 7 to 8 September 2016 at African Pride Crystal Hotel and Spa in Cape Town As grey literature the proceedings are the contributions made by researchers at the conference and are considered the written record of the work that was presented to fellow conference delegates Methodology The methodology used varies from researcher to researcher but are suitable for the studies conducted Thus on the one hand studies that were subjective in

nature used the interpretive paradigm where the qualitative approach adopted made use of the interview method to collect data. On the other hand, studies that were objectively inclined adopted the positivist philosophy and used survey questionnaires to collect data. However, there were some academic papers which used mixed methodology because of the nature of the study. Whatever methodology used adhered to the ethos of the philosophies underpinning the methodology.

Contribution made to scholarship The articles come from individual researchers and each article in the proceedings is unique. Mostly, there is no general argument leading from one contribution to the next. However, it is interesting to note that in the area of economic performance, it was evident that real exchange rate and net foreign direct investment contribute more towards innovations in economic growth. With regard to human capital development, papers presented evidence that there exists a definite need to explore the phenomenon of personal branding as limited scientific academic research has been done within the field of personal branding or on elements of the topic. Thus, the outcome argues that personal branding has an influence on leadership style which in turn impacts on organisational performance and related hygiene factors. Furthermore, it was demonstrated that current methods or strategies for enforcing institutionalisation of knowledge sharing within an organisation have not been successful and as such new strategies are needed to reinforce efforts to nurture and invigorate the institutionalisation of knowledge sharing within an organisation. With regard to technology and big data impact on organisational performance, it was evident that system performance, memory consumption, and CPU utilisation can be used as criteria to compare and evaluate big data technologies to improve organisational performance. Most of the articles contribution reemphasised technology education and training as a means of digitising business and improving effectiveness.

Target audience The target readership is academic researchers and business leaders who require access to the latest developments in the fields of economics, information management, business education, development studies, social sciences, and technology. It is also for policymakers and other stakeholders who need a better understanding of the impact of new developments on existing policies and regulations for their review or amendment.

The Economics and Management of Water and Drainage in Agriculture Ariel Dinar,David Zilberman,2012-12-06 Jan van Schilfhaarde USDA Agricultural Research Service and National Research Council Committee on Irrigation Induced Water Quality Problems In 1982 a startling discovery was made Many waterbirds in Kesterson National Wildlife Refuge were dying or suffering reproductive failure Located in the San Joaquin Valley Valley of California the Kesterson Reservoir Kesterson was used to store agricultural drainage water and it was soon determined that the probable cause of the damage to wildlife was high concentrations of selenium derived from the water and water organisms in the reservoir This discovery drastically changed numerous aspects of water management in California and especially affected irrigated agriculture In fact the repercussions spilled over to much of the Western United States For a century water development for irrigation has been a religiously pursued means for economic development of the West The primary objective of the Reclamation Act of 1902 was purportedly the development of irrigation water to support family farms which in turn would enhance the regional economy Worster 1985

Management to Facilitate Compliance with Global Conventions During Hazardous and Toxic Waste Cleanup Projects in Asia Ron Laurence McDowall,2006-01-28 The management of hazardous and toxic waste projects in Asia especially that related to intractable chemicals has had a less than acceptable performance profile during the last 20 years There have been numerous documented cases of management and systems failures in intractable chemical recovery projects despite the establishment of global conventions designed to avoid such problems A research programme was undertaken with the aim of producing a management model for companies to help prevent such failures in the future The

research began in the field with an exploration of management culture and its impact on project management. This involved multiple visits to five Asian countries and interviewing people involved in intractable waste management at both strategic and operational levels and reviewing project records. Personnel in government departments particularly the competent authority were interviewed to gain insights into the applied management culture within the five countries studied. The various international conventions or regulations regarding hazardous waste and its management were researched for their interdependence and effectiveness. The research concentrated on the Management Plans or Environmental Management Systems that reside within these conventions in order to establish a benchmark of expectation concerning standards of management and organisation that would be required of a member state to discharge its obligations under the conventions. This work involved the author attending several meetings and conferences of the parties to the UNEP Basel Convention as well as attendance at many Technical Working Groups over several years. Complexity theory and uncertainty theory along with emergent theory and innovation adoption theory were researched. The outcome of this research clearly suggested that a multidimensional matrix based approach could be successful in providing companies with a strategic management model that if applied could enable them to manage large scale intractable projects effectively in compliance with the conventions. The hypothesis of this work is that Duncan's matrix model can be reverse applied to the external environmental elements and components combined with the mutual adaptation model i.e. technology organisational mutual adaptation therefore establishing an integrated multidimensional model of adaptation. The mutual adaptation approach was subsequently used to frame a series of questions that formed the basis of four field surveys. These surveys were applied at different times over a five year period covering ten projects in China and Taiwan and involving interviews with a total of 100 executives who were asked a total of 96 questions across the four surveys resulting in 9600 responses. The first two surveys were conducted close together in time with the third and fourth later in the process and thus could be considered retrospective. The respondents included project managers, engineers, technicians, company accountants, marketing managers and site leaders. The data collected validated the hypothesis and established that complexity management was an element of those companies that successfully adopted external technology and systems and in fact were also engaged in reversing the technology back to the originators. The data also indicated that those companies not engaging in complexity management were not reversing technology adoption. An integrated mutual adaptation model was developed from the characterisation matrices and consequently a two dimensional model of singularity. The final singularity model can be applied at an organisation's strategic level so as to provide an organisational capacity for compliance with environmentally sound management practices as demanded by the international hazardous waste conventions.
