## **Managing Institutional Assets:**

**Managing Government Property Assets** Olga Kaganova, 2006 Governments own a vast array of real property from large stretches of land to public housing projects from water distribution systems and roads to office buildings Typically management of public property is highly fragmented with responsibility for each type of asset falling within a different agency or bureaucracy In almost all countries different classes of property are managed according to their own rules often following traditional practices rather than any assessment of what type of management is appropriate Over the past decade however a new discipline has emerged that examines this important component of public wealth and seeks to apply standards of economic efficiency and effective organizational management **Managing Government Property Assets** reviews and analyzes this recent wave of activity The authors draw upon a wide variety of national and local practices both in countries that have been leaders in management reforms and in countries just beginning to wrestle with the problem This comparison reveals that the issues of public property management are surprisingly similar in different countries despite striking differences in institutional contexts and policy solutions

**Asset Management and Investor Protection** Julian Franks, Colin Mayer, Luis Correia da Silva, 2003-01-16 Asset management is a major industry playing an increasingly important role in economic activity around the world Asset managers provide services to individuals governments public agencies banks pension funds insurance companies and charities to name a few Traditionally asset management has been primarily associated with the stock market economies of the UK and the USA but as this book shows some of the most spectacular growth in activity of recent years has occurred in Continental Europe This has presented opportunities and challenges New forms of financial instruments and institutions have emerged in countries that have traditionally relied on debt and non market forms of intermediation Competition has intensified and entry has occurred both within and across national markets However this growth has been accompanied by potential problems while investors enjoy a wider range of products and services they face more complex instruments and transactions Therefore the potential for failures such as misdealing and fraud may have increased The natural response is to strengthen regulation but there is a fine

balance to be struck between inadequate and excessive regulation of asset managers This is particularly complicated in the context of European capital markets European countries have traditionally had very different financial systems and asset management businesses therefore it is no surprise to discover many different approaches to regulating asset managers How should the European Commission respond to this diversity Should it seek to create greater uniformity via common regulatory rules The particular focus of this book is financial resource requirements There is currently an active debate about the role capital requirements should play in asset management particularly in the European context In order to address this issue the authors argue that it is necessary to understand the nature of the asset management business in different countries and the risks that it faces They therefore discuss how the asset management business operates how it is organized the nature and size of risks in the business who bears them and how they are financed and what the alternative forms of investor protection are together with their associated costs and benefits
