IP Address Management Timothy Rooney, 2011-04-20 This book will be the first covering the subject of IP address management IPAM The practice of IPAM includes the application of network management disciplines to IP address space and associated network services namely DHCP Dynamic Host Configuration Protocol and DNS Domain Name System The consequence of inaccurately configuring DHCP is that end users may not be able to obtain IP addresses to access the network Without proper DNS configuration usability of the network will greatly suffer as the name to address lookup process may fail Imagine having to navigate to a website or send an email or an instant message by IP address instead of by name It s equally important that these DHCP and DNS configurations be based on a common IP address plan which maps out the IP address hierarchy subnets address pools and domains IPAM applies management disciplines to these core services including configuration change control auditing reporting and so on and they are necessary given the absolute requirement for properly managing IP space and DHCP and DNS servers The linkages among an IP address plan DHCP server configuration and DNS server configuration are inseparable a change of an IP address will affect DNS information and perhaps DHCP as well These functions provide the foundation for today s converged services IP networks so they need to be managed using a rigorous approach Today there is no single book that covers the management of these linkages and services they provide IP Address Management Principles and Practice will fill that gap While several books are available for leading vendors DHCP and DNS services implementations few exist for IP address planning and none exist that unifies these three topics To obtain a free copy of the IPAM Configuration Guide please send an email to ieeeproposals@wiley.com

Network Economics for Next Generation Networks Peter Reichl, Burkhard Stiller, Bruno Tuffin, 2009-05-07 Starting with the imminent roll out of the IP Multimedia Subsystem IMS and fourth Generation networking technology Next Generation Networks NGN are gradually becoming reality with charging and Quality of Service QoS issues as two of the key drivers for the evolution toward the convergent all IP network of the future Therefore the 6th International Workshop on Internet Charging and QoS Technology ICQT 2009 was devoted to discussing the most recent approaches

models and mechanisms in this highly interesting and important research area The present volume of the Lecture Notes in Computer Science series includes those papers presented at ICQT 2009 collocated this year with the IFIP Networking 2009 conference taking place on May 15 2009 in Aachen Germany and hosted by the Rheinisch Westf lische Technische Hochschule RWTH Aachen For the commercial success of future QoS enabled communication services the emergence of viable business models pricing schemes and charging and accounting mechanisms is of paramount importance Problems in this domain can only be addressed through a broad interdisciplinary approach linking together a variety of technical and economic perspectives which are constantly driving a plethora of relevant research t ics for application developers business architects network providers service providers and customers Within the current trend toward a convergent NGN architecture compe tion modeling pricing mechanisms and the economics of inter domain traffic are of specific importance and urgency Thus they determined in the form of three technical sessions the core of the ICQT 2009 program
