searching for concepts and images to illuminate their underlying and shifting modes of organizing Nowhere has this controversy been more intense than in the United Kingdom given the long succession of top down reorganizations within the National Health Service NHS over the last thirty years This book characterises the nature of key reforms namely managed networks introduced in the UK National Health Service during the New Labour period 1997 2010 combining rich empirical case material of such managed networks drawn from different health policy arenas clinical genetics cancer networks sexual health networks and long term care with a theoretically informed analysis The book makes three key contributions Firstly it argues that New Labour s reforms included an important network element consistent with underlying network governance ideas specifying conditions of success for these managed networks and exploring how much progress was empirically evident Secondly in order to conceptualise many of the complex health policy arenas studied the book uses the concept of wicked problems problematic situations with no obvious solutions whose scope goes beyond any one agency often with conflicting stakeholder interests where there are major social and behavioural dimensions to be considered alongside clinical considerations Thirdly it makes a contribution to the expanding Foucauldian and governmentality based literature on health care organizations by retheorising organizational processes and policy developments which do not fit either professional dominance or NPM models from a governmentality perspective From the empirical evidence gathered the book argues that managed networks as opposed to alternative governance modes of hierarchy or markets may well be the most suitable governance mode in those many and expanding policy arenas characterised by wicked problems and should be given more time to develop and reach their potential
