Jarrah,Stanford University. Department of Aeronautics and Astronautics,1988 *Post Stall Maneuvers and Thrust Vectoring Performance Analysis* L. Earl Miller,1984 The purpose of this effort was to determine whether or not there are any apparent performance improvements through Post Stall Maneuvers PSM or thrust vectoring PSM is a result of high angles of attack greater than the stall value Two different problems were addressed The first examined instantaneous turning performance The second focused on minimum time turn problems The impact of both vectored and nonvectored thrust was considered It was proven that minimum time turns fall in the vertical plane For maximum instantaneous turning rate and nonvectored thrust high angle of attack results if the speed is less than the critical speed which is approximately Mach 0.2 The optimal angle of attack approaches ninety degrees as the speed approaches zero For vectored thrust the stall angle of attack is optimum and the thrust vector angle is the complement of the angle of attack PSM is not optimal if thrust vectoring is available For minimum time turning performance maximum thrust is optimal At the end of the trajectory the optimal angle of attack equals that for maximum instantaneous performance PSM is optimal As the thrust to weight ratio increases the maximum angle of attack increases Piloted Simulation Assessment of a High-Speed Civil Transport Configuration ,2002 An assessment of a proposed configuration of a high speed civil transport was conducted by using NASA and industry research pilots The assessment was conducted to evaluate operational aspects of the configuration from a pilot's perspective with the primary goal being to identify potential deficiencies in the configuration The configuration was evaluated within and at the limits of the design operating envelope to determine the suitability of the configuration to maneuver in a typical mission as well as in emergency Or envelope limit conditions The Cooper Harper rating scale was used to evaluate the flying qualities of the configuration A summary flying qualities metric was also calculated The assessment was performed in the Langley six degree of freedom Visual Motion Simulator The effect of a restricted cockpit field of view due to obstruction by the vehicle nose was not included in this study NASA Technical Note ,1977 Image and Graphics Technologies and Applications Yongtian Wang,Huimin Ma,Yuxin Peng,Yue Liu,Ran He,2022-07-21 This book constitutes the refereed proceedings of the 17th Chinese Conference on Image and Graphics Technologies and Applications IGTA 2022 held in Beijing China during April 23-24 2022 The 25 full papers included in this book were carefully reviewed and selected from 77 submissions They were organized in topical sections as follows image
