Peter Saenger

Mangrove Summer:

The Mangrove Summer Jack Lasenby, 2009 In 1941 there are rumours that the Japanese may invade New Zealand George's mother decides to send the family to their bach on the east coast of the Coromandel The children decide that to survive they need to fend for themselves in the mangroves without the adults **Tropical Mangrove Ecosystems** A. I. Robertson, D. M. Alongi, 2013-03-18 Published by the American Geophysical Union as part of the Coastal and Estuarine Studies Volume 41 Mangrove forests are a dominant feature of tropical coasts Like their terrestrial counterparts these forests are under threat worldwide through a variety of destructive human practices As is also the case with tropical terrestrial forests management decisions about mangrove ecosystems are currently being made often without adequate fundamental knowledge of the processes controlling natural ecosystem function *The Mangrove Summer* Jack Lasenby, 1990-02 In the summer of 1941 a group of cousins staying on the east coast of the Coromandel to escape a possible Japanese invasion decide that to survive they need to fend for themselves in the mangroves without the adults with tragic results *Mangrove Ecosystem Ecology and Function* Sahadev Sharma, 2018-11-07 Mangrove Ecosystem Ecology and Function deals with several aspects of mangrove science as well as conservation management and related policies The book is divided into six sections and structured into 10 chapters The first section discusses mangrove ecology structure and function the second section explains mangrove physiology related to salt accumulation the third section focuses on mangrove polychaetes the fourth section talks about the bioprospect of mangrove microbes the fifth section discusses soil geochemistry and the sixth section elucidates mangrove management and conservation Researchers from different countries and fields of mangrove ecosystem exploration have contributed their findings This book would be an ideal source of scientific information to graduate students advanced students researchers scientists and stakeholders involved in mangrove ecosystem research **Mangrove Ecosystems** Volker Linneweber, 2013-06-29 Protection of the environment has nowadays become a major challenge and a condition for survival of future human generations and life on Earth in general Yet it is still far too much of a dream or hope rather than a reality in the policy of our societies Presently we are experiencing an unprecedented exponential growth of demography combined with a race for profit resulting in excessive consumption particularly of energy and a serious impact on the world ecosystems Various types of pollutants and emerging new diseases not only disrupt the normal course of life but also above this some of the atmospheric pollutants are most likely involved in the changing climate We fear and literally shiver at the thought that the changing climate would ultimately disrupt the fragile thermodynamic equilibrium between the atmosphere and the oceans Are we insensitive to these facts to the point of pushing our descendants some generations ahead into a new glacial period after a first period of warming up at least in northern Europe like the one that took place 13 to 14 millennia ago Surely the planet's nature is not prepared to be dominated by man and will go its way whether humanity will be alive or dead Fisherman's Coast Aaron J.
