Whitaker, 2008-04-29 In the last ten years the neuroscience of language has matured as a field Ten years ago neuroimaging was just being explored for neurolinguistic questions whereas today it constitutes a routine component At the same time there have been significant developments in linguistic and psychological theory that speak to the neuroscience of language This book consolidates those advances into a single reference The Handbook of the

Neuroscience of Language provides a comprehensive overview of this field. Divided into five sections, section one discusses methods and techniques including clinical assessment approaches, methods of mapping the human brain, and a theoretical framework for interpreting the multiple levels of neural organization that contribute to language comprehension. Section two discusses the impact of imaging techniques: PET, fMRI, ERPs, electrical stimulation of language cortex, and TMS have made to language research. Section three discusses experimental approaches to the field, including disorders at different language levels in reading as well as writing and number processing. Additionally, chapters here present computational models, discuss the role of mirror systems for language, and cover brain lateralization with respect to language. Part four focuses on language in special populations, in various disease processes, and in developmental disorders. The book ends with a listing of resources in the neuroscience of language and a glossary of items and concepts to help the novice become acquainted with the field. Editors Stemmer and Whitaker prepared this book to reflect recent developments in neurolinguistics, moving the book squarely into the cognitive neuroscience of language and capturing the developments in the field over the past 7 years.

**Neurogenic Language Disorders in Children** Franco Fabbro, 2021-12-28. Language disorders in children are one of the most frequent causes of difficulties in communication, social interaction, learning, and academic achievement. It has been estimated that over 5% of children present with some kind of language disorder. This volume illustrates the state of the art in neurogenic language disorders in children. The most recent findings about acquired epileptiform aphasia, from Landau-Kleffner syndrome to autistic regression, are presented and discussed. Language disorders in children with early brain lesions are reviewed in relation to the side of the lesion and their epileptic correlates, e.g., paroxysmal abnormalities during NREM sleep. New clinical reports are presented, and a large discussion is held on language disorders due to malformation or tumor lesions localized to the Posterior Fossa. The last part of the volume reviews the state of the art on some of the most debated clinical neurolinguistic pictures of developmental age, such as crossed aphasia in children, the modality and types of aphasia recovery in children, and persistent acquired childhood aphasia. This volume is the fifth in a series of books commissioned by the International Association of Logopedics and Phoniatrics.

**Multilingualism and Ageing**, 2020-10-20. Multilingualism and Ageing provides an overview of research on a large range of topics relating to language processing and language use from a life span perspective. It is unique in covering and combining psycholinguistic and sociolinguistic approaches, discussing questions such as: Is it beneficial to speak more than one language when growing old? How are languages processed in multilingual persons, and how does this change over time? What happens to language and communication in multilingual

aphasia or dementia How is multilingual ageing portrayed in the media Multilingualism and Ageing is a joint cross disciplinary venture of researchers from the Centre for Multilingualism in Society across the Lifespan at The University of Oslo and the editors of this publication
