

An anatomical model of a human body, possibly made of wax or wood, with its arms raised in a 'V' shape. The model is positioned in the center of the frame, standing on a small circular base. It is set against a dark background with two large, vertical, glowing light sources on either side, creating a dramatic, museum-like atmosphere. The model's torso is open, revealing internal organs and the ribcage. The legs are also visible, showing some internal structure.

modern science challenging the myth that modern science is built on a bedrock of objectivity and confident empiricism In this fascinating look into the private world of British natural philosophers including John Dalton Lord Kelvin Charles Babbage John Herschel and many others Elizabeth Green Musselman shows how the internal workings of their bodies played an important part in the sciences movement to the center of modern life and how a scientific community and a nation struggled their way into existence Many of these natural philosophers endured serious nervous difficulties particularly vision problems They turned these weaknesses into strengths however by claiming that their well disciplined mental skills enabled them to transcend their bodily frailties Their adeptness at transcendence they asserted explained why men of science belonged at the heart of modern life and qualified them to address such problems as unifying the British provinces into one nation managing the industrial workplace and accommodating religious plurality      **Science for the Nation** P. Morris,2016-01-05 An engaging study of a great national institution Essays explore the changing roles of museums and the perceived public role of a museum of science and technology Illuminates the ways in which we think about the collecting and display of objects and the often difficult relations between the state business and industry and museum funding      *Romantic Childhood, Romantic Heirs* Beatrice Turner,2017-10-17 This book views Romantic literature s discourses of childhood education and reproduction through the eyes of four early nineteenth century British authors who were uniquely implicated in those discourses Hartley and Sara Coleridge children of Samuel Taylor Coleridge and Mary Wollstonecraft Shelley and William Godwin Jr children of William Godwin shared the predicament of being both real and literary children All the children of authors who helped shape culturally definitive Romantic period ideas about childhood they wrote back to their fathers in order to understand and to resist the ways in which they were produced by paternal texts which foreclose the possibility of the child s own regeneration This study proposes that through this predicament and their responses to it the literature of the period between the Romantic and the Victorian periods comes into focus marked by an anxiety not of influence but of reproduction It suggests that one reason why this period has tended to disappear from view lies in the sense of historical and aesthetic difference and productive failure which this study uncovers      *Sexual Chemistry* Lara Marks,2010-01-01 BIRTH CONTROL CONTRACEPTION FAMILY PLANNING Heralded as the catalyst of the sexual revolution and the solution to global overpopulation the contraceptive pill was one of the twentieth century s most important inventions It has not only transformed the lives of millions of women but has also pushed the limits of drug monitoring and regulation across the world This deeply researched new history of the oral contraceptive shows how its development and use have raised crucial questions about the relationship between science medicine technology and society Lara Marks explores the reasons why the pill took so long to be developed and explains why it did not prove to be the social panacea envisioned by its inventors Unacceptable to the Catholic Church rejected by countries such as India and Japan too expensive for women in poor countries it has more recently been linked to cardiovascular problems      *Flesh and Blood* Susan E. Lederer,2008-04-24

Organ transplantation is one of the most dramatic interventions in modern medicine. Since the 1950s thousands of people have lived with new hearts, kidneys, lungs, corneas, and other organs and tissues transplanted into their bodies. From the beginning though, there was simply a problem: surgeons often encountered shortages of people willing and able to give their organs and tissues. To overcome this problem, they often brokered financial arrangements. Yet an ethic of gift exchange coexisted with the commodification of the body. The same duality characterized the field of blood transfusion, which was essential to the development of modern surgery. This book will be the first to bring together the histories of blood transfusion and organ transplantation. It will show how these two fields redrew the lines between self and non-self, the living and the dead, and humans and animals. Drawing on newspapers, magazines, legal cases, films, and the papers and correspondence of physicians and surgeons, Lederer will challenge the assumptions of some bioethicists and policymakers that popular fears about organ transplantation necessarily reflect timeless human concerns and preoccupations with the body. She will show how notions of the body intact in parts, living and dead, are shaped by the particular culture in which they are embedded.

Bodily Matters Nadja Durbach, 2005. DIV. Considers the Victorian anti-vaccination movement in the context of debates over citizenship, parental rights, class politics, the significance of bodily integrity, the control of contagious disease, and state access to the bodies of both adult and infant. Medicating Modern America Andrea Tone, Elizabeth Siegel Watkins, 2007-01-08. With Americans paying more than 200 billion each year for prescription pills, the pharmaceutical business is the most profitable in the nation. The popularity of prescription drugs in recent decades has remade the doctor-patient relationship, instituting prescription writing and pill-taking as an integral part of medical practice and everyday life. *Medicating Modern America* examines the meanings behind this pharmaceutical revolution through the interconnected histories of eight of the most influential and important drugs: antibiotics, mood stabilizers, hormone replacement therapy, oral contraceptives, tranquilizers, stimulants, statins, and Viagra. All of these drugs have been popular, profitable, influential, and controversial, and the authors take a historical approach to studying their development, prescription, and consumption. This perspective locates the histories of prescription medicines in specific cultural contexts while revealing the extent to which contemporary debates about pharmaceutical drugs echo concerns voiced by Americans in the past. Exploring the rich and multi-faceted history of pharmaceutical drugs in the United States, *Medicating Modern America* unveils the untold stories behind America's pharmaceutical obsession. Contributors include Robert Bud, Jennifer R. Fishman, Jeremy A. Greene, David Healy, Suzanne White, Junod, Ilina Singh, Andrea Tone, and Elizabeth Siegel Watkins. **Curatorial Challenges** Malene Vest Hansen, Anne Folke Henningsen, Anne Gregersen, 2019-03-04. *Curatorial Challenges* investigates the challenges faced by curators in contemporary society and explores which practices, ways of thinking, and types of knowledge production curating exhibitions could challenge. Bringing together international curators and researchers from the fields of art and cultural history, the book provides new research and perspectives on the curatorial process and aims to bridge the traditional gap between theoretical

and academic museum studies and museum practices The book focuses on exhibitions as a primary site of cultural exchange and argues that as highly visible showcases producers of knowledge and historically embedded events exhibitions establish and organize meanings of art and cultural heritage Temporary exhibitions continue to increase in cultural significance and yet the traditional role of the museum as a Bildung institution has changed As exhibitions gain in significance so too do curatorial strategies Arguing that new research is needed to help understand these changes the book presents original research that explores how curatorial strategies inform both art and cultural history museums in contemporary society The book also investigates what sort of critical transformative and perhaps even conservative potential can be traced in exhibition cultures Curatorial Challenges fosters innovative interdisciplinary exchange and brings new insights to the field of curatorial studies As such it should be of great interest to academics researchers and postgraduate students engaged in the study of curatorial practice museum studies the making of exhibitions museum communication and art history *Cabinets for the Curious* Ken Arnold, 2017-03-02 The last few years has within museums witnessed nothing short of a revolution Worried that the very institution was itself in danger of becoming a dusty forgotten culturally irrelevant exhibit vigorous efforts have been made to reshape the museum mission Fearing that history was coming to be ignored by modern society many institutions have instead marketed a de intellectualised heritage overly relying on computer technology to captivate a contemporary audience The theme of this work is that we can do much to reassess the rationale that inspires contemporary collections through a study of seventeenth century museums England s first museums were quite literally wonderful founded that is on the disciplined application of the faculty of wonder The type of wonder employed was not that post Romantic idea of disbelief but rather an active form of curiosity developed during the Renaissance particularly by the individuals who set about gathering objects and founding museums to further their enquiries The argument put forward in this book is that this museological practice of using objects actually to create as well as disseminate knowledge makes just as much sense today as it did in the seventeenth century and further that the best way of reinvigorating contemporary museums is to return to that form of wonder By taking such a comparative approach this book works both as a scholarly historical text and as an historically informed analysis of the key issues facing today s museums As such it will prove essential reading both for historians of collecting and museums and for anyone interested in the philosophies of modern museum management

**Devices and Desires** Andrea Tone, 2002-05 From thriving black market to big business the commercialization of birth control in the United States In *Devices and Desires* Andrea Tone breaks new ground by showing what it was really like to buy produce and use contraceptives during a century of profound social and technological change A down and out sausage casing worker by day who turned surplus animal intestines into a million dollar condom enterprise at night inventors who fashioned cervical caps out of watch springs and a mother of six who kissed photographs of the inventor of the Pill these are just a few of the individuals who make up this riveting story *Exposing Electronics* Bernard Finn, 2000-12-21 It is clear that artifacts

have the power to provoke thought inspire action and arouse passions There is evidence of this in the ever increasing number of museums as well as in the ability of those museums to stimulate controversy through exhibits As a consequence much has been written analyzing the interaction between objects and museum visitors Less well recognized or understood is the value of objects for historical research In this series of books we propose to show by example how artifacts can be employed in the study of the history of science and technology in ways ranging from motivating a line of research to providing hard evidence in the solution of an otherwise insoluble problem The first volume focused on medicine in this the second volume the topic our authors address is electronics As readers will discover there is considerable scope in the range of topics and in the range of uses of artifacts There is also a section that suggests to readers what kind of questions they might consider when they visit electrical exhibits and where those exhibits are to be found This series is sponsored by the Deutsches Museum in Munich the Science Museum in London and the Smithsonian Institution in Washington with help from professional historians in other museums and elsewhere

Medicine, Madness and Social History R. Bivins, J. Pickstone, 2007-06-15 Written in honour of eminent historian Roy Porter by twenty of his colleagues and students the collection renders cutting edge scholarship accessible Historians from the three fields that Porter made his own the histories of medicine madness and the Enlightenment illustrate his influence while tackling major themes ranging from disability rights to the popularization of science In their accounts artisan gardeners jostle with anarchists dentists and hypnotists in a lively and very Porterian parade
