Miscellaneous Articles on the Intersection of Posthumanism, Transhumanism, Anthropocene, and Post-Anthropocentrism in Some Select, Contemporary Novels Dr. Indrajit Patra,2021-06-14 The book intends to present a critique of some select 21st

Century hard science fiction novels in order to explicate the various ways in which the elements of posthumanism transhumanism techno singularity intersect and interact with other such ideas as monstrosity animality machinic post anthropocentrism and Anthropocene The study divides its analysis into seven different chapters and attempts to present an elaborate study on various aspects of posthumanism transhumanism and singularity The book despite being a collection of miscellaneous essays actually intends to show how a technologically mediated transhuman posthuman culture will normally be defined by a total dissolution of binaries such as digital and real animal and human and machine and man The book also wants to describe through its analysis of some select hard science fiction novels that man machine merger and creation of hyper immersive virtual reality can function as two of the most effective agents for catalyzing a radically transformative posthuman post scarcity and techno utopian culture The analysis presented in the book is not totally oriented to the discussion of far future implications of accelerated technological progress which is imperative for arriving at a transhuman or

posthuman stage rather the book is equally concerned with the implications of rapid technological advancements in our present times and so the study also posits that before ascending to the heights of posthuman status mankind has to cope with the good and bad aspects of the Anthropocene which is the next stage in our collective evolution and journey towards the trans posthuman state The first chapter of this study attempts to bring to focus the phenomenon of a technologically mediated dissolution of the binaries between man animal human nonhuman and subject object which will be extremely important in the analysis of the emergence of a posthuman culture later in the study Technological advancements can be seen here as either conducive towards creating a harmonious relationship between man and animal or through systematic denigration of the agency of the animal it can pave the way for the emergence of monstrosity In Chapter 2 of the book we shall delve deep into the analysis of horror as illustrated in the novels and video games of the Dead Space series Here through a multi theoretical perspective we shall find how horrors and monstrosity can manifest themselves in both written as well as digital virtual media In Chapter 3 we shall delve into the discussion of the power of simulation in the construction of an immersive and hyperreal post transhuman culture where the distinction between real and virtual and material and immaterial vanishes altogether In Chapter 4 we dedicate the entire chapter to the study of Kim Stanley Robinson s systems novel The Ministry for the Future 2020 to attempt a critique of the elements of good and bad Anthropocene Though not directly and intimately related to the study of posthumanism and transhumanism yet a discussion of the elements of the Anthropocene will be of immense contemporary relevance to us The next Chapter i e Chapter 5 will attempt to present an explication of the role of machines in the realization of posthuman culture Chapter 6 is primarily concerned with an analysis of Stephen Baxter s novels to see how posthuman culture is constructed around the agency of the autopoietic machines The final chapter attempts to present a brief analysis of three of Iain M Banks Culture novels namely Matter Surface Detail and Hydrogen Sonata to elaborate on the employment of posthuman transhuman tropes in these works

The Invention of Infinity: Essays on Husserl and the History of Philosophy Claudio Majolino, 2023-09-29 This book covers Husserl s stance on the philosopher and the history of philosophy whether or not such a history is part of the philosophical attitude itself and if so how Husserl s phenomenology might weigh in on such matters Firstly this text spells out some of the manifold ways in which the history of philosophy works its way in Husserl s phenomenology showing how concepts methods and problems drawn from various Ancient and Modern philosophical traditions Platonism Aristotelianism Sophistry Stoicism Scholasticism Modern Rationalism are transformed and embedded within transcendental phenomenology itself Secondly it shows how a better understanding of the distinctive patterns by means of which Husserl s phenomenology confronts the history of philosophy could be extremely significant for historians of philosophy who are interested in learning something entirely new about the unexplored horizons of such concepts methods and problems Finally based on such twofold historical and philosophical approach and thanks to a substantial reinterpretation of some key phenomenological concepts such as

multiplicity constitution attitude and variation this book provides a novel and original reading of Husserl's overall philosophical project in its full meaning and scope By doing so this volume appeals to both students and researchers and critically engages in mainstream interpretations of phenomenology suggesting a unique take on the idea of transcendental phenomenology as a whole

Frustrated Materials and Ferroic Glasses Turab Lookman, Xiaobing Ren, 2018-11-01 This book provides a comprehensive introduction to ferroics and frustrated materials Ferroics comprise a range of materials classes with functionalities such as magnetism polarization and orbital degrees of freedom and strain Frustration due to geometrical constraints and disorder due to chemical and/or structural inhomogeneities can lead to glassy behavior which has either been directly observed or inferred in a range of materials classes from model systems such as artificial spin ice shape memory alloys and ferroelectrics to electronically functional materials such as manganites Interesting and unusual properties are found to be associated with these glasses and have potential for novel applications Just as in prototypical spin glass and structural glasses the elements of frustration and disorder lead to non-ergodicity history dependence frequency dependent

relaxation behavior and the presence of inhomogeneous nano clusters or domains In addition there are new states of matter such as spin ice however it is still an open question as to whether these systems belong to the same family or universality class The purpose of this work is to collect in a single volume the range of materials systems with differing functionalities that show many of the common characteristics of geometrical frustration where interacting degrees of freedom do not fit in a lattice or medium and glassy behavior is accompanied by additional presence of disorder The chapters are written by experts in their fields and span experiment and theory as well as simulations Frustrated Materials and Ferroic Glasses will be of interest to a wide range of readers in condensed matter physics and materials science
