Ranching, Mining, and the Human Impact of Natural Resources Development Raymond L. Gold, This book is intended for people interested in the environment American society rural and urban affairs social impact assessment and urban structures generally It is also aimed at industrial and community planners and natural resource development firms and formulated to implement a social policy concerning resource development and public agencies Ranching Mining and the Human Impact of Natural Resources Development reports and observes people whose lives have been importantly affected by industrialization of rural communities in the American West Such community change research is rarely done but is invaluable for its real world groundings for a variety of social science theories This study evolved out of ethnographic research of Western communities done over a full decade Initially performed to meet requirements for social impact analysis these studies have a much larger concern namely identifying those areas of social change that contribute to the standing of small communities and how they persist in the face of seemingly overwhelming odds of the highly advanced urban complex Professor Gold has written the first work which examines and accounts for the rise of local citizens groups to a sense of being a community Its account of this process covers both ordinarily slow and extraordinarily rapid areas of change in Western

societies It places the Gemeinschaft in proper perspective as the foundation upon which all other aspects of community social structure are built In this regard it is a contribution to basic social theory showing clearly the interrelation between small community and large society elements of the structure and functioning of community life The work is subtly textured combining structural cultural and symbolic perspectives in its account of the experience of the community of Sagebrush Gold s monograph is one of a kind No other book brings together the story of social effects of natural resource development projects in the American West Human Impact on the Earth William B. Meyer,1996-02-23 At a level accessible to the general reader this balanced and non polemical book describes the changes human activities have produced in the global environment from 300 years ago to today **Dictionary Catalog of the Department Library** United States. Department of the Interior. Library,1969 *Principles of Environmental Science and Technology* I. Johnsen,S.E. Jorgensen,1989-01-01 Since the publication of the first edition of this book in 1981 it has been widely used as a textbook at university level for graduate courses in environmental management environmental science and environmental technology for non engineers As this second edition is significantly improved it should find an even wider application than the first In the second edition the section on ecotoxicology and effects on pollutants has been expanded considerably as has Chapter 4 on ecological principles and concepts Further improvement has been made by the addition of a section on ecological engineering the application of ecologically sound technology in ecosystems and an appendix on environmental examination of chemicals The problems of agricultural waste have been included in Part B and in Chapter 6 on waste water treatment several pages have been added about non point sources and the application of soft technology Throughout the book more examples questions and problems have been included and several figures and tables have been added to better illustrate the text U.S. Environmental Protection Agency Library System Book Catalog United States. Gierloff-Emden,2019-08-01 No detailed description available for Orbital remote sensing of coastal and offshore environments *Commitment and Compliance* Dinah Shelton,2003 The studies in this book concern the nature of international law how it is and is not constituted and whether commitments that are legally binding can change the behaviour of states as well as or better than non binding legal norms do Silicon Versus Carbon Yuri Magarshak,Sergey Kozyrev,Ashok K. Vaseashta,2009-05-21 Even though there is no generally accepted definition of nanotechnologies to be defined as distinct discipline there is an emerging consensus that their advent and development is a growing in importance factor of the contemporary and future technological civilization One of these most fundamental issues we are confronted with is the compatibility with life itself From single cell organisms to humans carbon is a key building block of all molecular structures of life In contrast the man created electronic industry to build on other elements of which silicon is the most common Both carbon and silicon create molecular chains although different in their internal structure All life is built from carbon based chains As long as the man built technological products

do not directly interfere with the physiology of life the associated risks from them are relatively easy to identify They are primarily in the environmental pollution and the possibility of upsetting the natural balance of biocoenosis on a planetary scale The basic life functions are still not directly subverted We can use TV computers drive cars and use other technological utilities without fear of direct interference with our cellular functions This is in particular because all these technological utilities are many orders of magnitude larger than typical scales of biological activity Most of biological activity from fermentative catalysis to DNA replication takes place on nanoscale The situation is radically different when the technological goals are building nanoscale size products All biological processes take place on nanoscale

Encyclopedia of Environmental Change John A Matthews, 2013-12-13 Accessibly written by a team of international authors the Encyclopedia of Environmental Change provides a gateway to the complex facts concepts techniques methodology and philosophy of environmental change This three volume set illustrates and examines topics within this dynamic and rapidly changing interdisciplinary field The encyclopedia includes all of the following aspects of environmental change Diverse evidence of environmental change including climate change and changes on land and in the oceans Underlying natural and anthropogenic causes and mechanisms Wide ranging local regional and global impacts from the polar regions to the tropics Responses of geo ecosystems and human environmental systems in the face of past present and future environmental change Approaches methodologies and techniques used for reconstructing dating monitoring modelling projecting and predicting change Social economic and political dimensions of environmental issues environmental conservation and management and environmental policy Over 4 000 entries explore the following key themes and more Conservation Demographic change Environmental management Environmental policy Environmental security Food security Glaciation Green Revolution Human impact on environment Industrialization Landuse change Military impacts on environment Mining and mining impacts Nuclear energy Pollution Renewable resources Solar energy Sustainability Tourism Trade Water resources Water security Wildlife conservation The comprehensive coverage of terminology includes layers of entries ranging from one line definitions to short essays making this an invaluable companion for any student of physical geography environmental geography or environmental sciences

Restoration of Ecosystems – Bridging Nature and Humans Stefan Zerger, 2023-02-13 In this interdisciplinary textbook which bridges the gap between the natural and social sciences both the scientific principles of restoration ecology and practical aspects of ecosystem restoration are comprehensively presented The diversity of land use types with a focus on Central Europe is highlighted and case studies of practical restoration projects are presented The textbook offers students who deal with the environment as well as scientists and practitioners a profound and up to date but also critical overview of the state of knowledge This book opens up the broad spectrum of degraded ecosystems of Central European natural and cultural landscapes In further chapters marine ecosystems and their restoration as well as development potentials and the limits of restoration are discussed in more detail The ecological fundamentals are expanded

through an interdisciplinary perspective taking into account environmental ethics sociology anthropology and economics In addition to an up to date overview of the various areas and fields of activity in restoration ecology and ecosystem restoration the textbook provides a valuable basis for studies science and practice The students also receive assistance in searching for literature and critical fact analysis and the lecturers on teaching formats and interdisciplinary approaches to discussion in restoration ecology
