Crombie,1990-07-01 The author sees the history of Western Science as the history of a vision and an argument initiated by the ancient Greeks in their search for principles at once of nature and of argument itself This scientific vision explored and controlled by argument and the diversification of both vision and argument by scientific experience and by interaction with the wider contexts of intellectual culture constitute the long history of European scientific thought Underlying that development have been specific commitments to conceptions of nature and of science and its intellectual and moral assumptions accompanied by a recurrent critique their diversification has generated a series of different styles of scientific thinking and of making theoretical and practical decisions which the work describes

literary criticism and cultural studies for years Even as he continues to produce new writing of a high standard an example of which is included in this collection his work has elicited responses from a new generation of writers in Europe and America This collection showcases this new work while illustrating the variety of Cavell s interests in the ordinary language philosophy of Wittgenstein and Austin in film criticism and theory in literature psychoanalysis and the American transcendentalism of Ralph Waldo Emerson and Henry David Thoreau The collection also reprints Richard Rorty s early review of Cavell s magnum opus *The Claim of Reason* 1979 and it concludes with Cavell s substantial set of responses to the essays a highlight of which is his engagement with Rorty

Artists Activating Sustainability Barbara Sellers-Young,2022-10-11 Artists Activating Sustainability the Oregon Story examines the way in which the artists within specific communities against the background of landscape and history reveal concepts of sustainability that help us broaden our knowledge of what is needed to create a sustainable world **Back to the University's Future** Steve Fuller,2023-07-08 This volume addresses the central question facing the future of higher

education around the world whether and why universities need to exist at all This book accepts the question s premise It is not clear that the university is any longer needed as an institution that is unless its defenders recover what had made the university the revolutionary institution that over the past two centuries has not only defined the shape of modern systematic inquiry but also the distinctiveness of the societies that have housed them In short what is required is a reanimation of the spirit of Wilhelm von Humboldt for our times hence the book s title and subtitle Humboldt was responsible for relauching the university as the vanguard institution of Enlightenment to which we continue to pay lip service and sometimes not much more than that Admittedly the task of relauching Humboldt today is made difficult because many of the concrete achievements associated with the Humboldtian university not least academic disciplines and nation states are increasingly seen as problematic if not obsolete However the global reach of the Humboldtian vision in its 19th century and 20th century heyday offers hope that it may be recovered in the 21st century The book focuses on the performative character of the academic vocation what Humboldt memorably characterized as the unity of research and teaching in the same person a role model for students and society at large The book s seven chapters develop this theme in a historically and philosophically nuanced way in terms of the Humboldtian vision of knowledge sense of free expression and critical judgement and commitment to translation and publicity
