Teaching by Design in Elementary Mathematics, Grades K-1 Jennifer Stepanek, Melinda Leong, Linda Griffin, 2010-11-16 Strengthen your mathematics lessons through collaborative planning Teaching by Design in Elementary Mathematics is a series of comprehensive professional development guides that help teachers investigate how students learn Grounded in the latest research this book is one of three volumes focused on grade appropriate number and operations topics aligned with the Common Core State Standards The capstone activity of each book guides the group through the co creation and implementation of a prototype lesson The teacher teams then evaluate the impact of the lesson on student learning and work together to revise it for maximum effectiveness Through the process teachers develop Deeper content knowledge of important mathematical concepts Improved understanding of how students learn these mathematical ideas A stronger foundation for developing effective lessons and improving instruction Enhanced collaboration skills Each volume includes a large assortment of reproducible handouts as well as built in facilitation notes Teachers will also find helpful resources that address the issue of finding time for school based professional development and teacher collaboration Handbook of Cognitive Mathematics Marcel Danesi, 2022-10-31 Cognitive mathematics provides insights into how mathematics works inside the brain and how it is interconnected with other faculties through so called blending and other associative processes This handbook is the first large collection of various aspects of cognitive mathematics to be amassed into a single title covering decades of connection between mathematics and other figurative processes as they manifest themselves in language art and even algorithms It will be of use to anyone working in math cognition and education with each section of the handbook edited by an international leader in that field *Resources in Education* , 1998 **Mathematical Logic** Wei Li, 2014-11-07 Mathematical logic is a branch of mathematics that takes axiom systems and mathematical proofs as its objects of study This book shows how it can also provide a foundation for the development of information science and technology The first five chapters systematically present the core topics of classical mathematical logic including the syntax and models of first order languages formal inference systems computability and representability and Godel's theorems The last five chapters present extensions and developments of classical mathematical logic particularly the concepts of version sequences of formal theories and their limits the system of revision calculus proschemes formal descriptions of proof methods and strategies and their properties and the theory of inductive inference All of these themes contribute to a formal theory of axiomatization and its application to the process of developing information technology and scientific theories The book also describes the paradigm of three kinds of language environments for theories and it presents the basic properties required of a meta language environment Finally the book brings these themes together by describing a workflow for scientific research in the information era in which formal methods interactive software and human invention are all used to their advantage The second edition of the book includes major revisions on the proof of the completeness theorem of the

Gentzen system and new contents on the logic of scientific discovery R calculus without cut and the operational semantics of program debugging This book represents a valuable reference for graduate and undergraduate students and researchers in mathematics information science and technology and other relevant areas of natural sciences Its first five chapters serve as an undergraduate text in mathematical logic and the last five chapters are addressed to graduate students in relevant disciplines
