Nutrient Use Efficiency: from Basics to Advances Amitava Rakshit, Harikesh Bahadur Singh, Avijit Sen, 2014-12-26 This book addresses in detail multifaceted approaches to boosting nutrient use efficiency NUE that are modified by plant interactions with environmental variables and combine physiological microbial biotechnological and agronomic aspects Conveying an in depth understanding of the topic will spark the development of new cultivars and strains to induce NUE coupled with best management practices that will immensely benefit agricultural systems safeguarding their soil water and air quality Written by recognized experts in the field the book is intended to provide students scientists and policymakers with essential insights into holistic approaches to NUE as well as an overview of some successful case studies In the present understanding of agriculture NUE represents a question of process optimization in response to the increasing fragility of our natural resources base and threats to food grain security across the globe Further improving nutrient use efficiency is a prerequisite to reducing production costs expanding crop acreage into non competitive marginal lands with low nutrient resources and preventing environmental contamination The nutrients most commonly limiting plant growth are N P K S and micronutrients like Fe Zn B and Mo NUE depends on the ability to efficiently take up the nutrient from the soil but also on transport storage mobilization usage within the plant and the environment A number of approaches can help us to understand NUE as a whole One involves adopting best crop management practices that take into account root induced rhizosphere processes which play a pivotal role in

controlling nutrient dynamics in the soil plant atmosphere continuum New technologies from basic tools like leaf color charts to sophisticated sensor based systems and laser land leveling can reduce the dependency on laboratory assistance and manual labor Another approach concerns the development of crop plants through genetic manipulations that allow them to take up and assimilate nutrients more efficiently as well as identifying processes of plant responses to nutrient deficiency stress and exploring natural genetic variation Though only recently introduced the ability of microbial inoculants to induce NUE is gaining in importance as the loss immobilization release and availability of nutrients are mediated by soil microbial processes

Nutrient Dynamics for Sustainable Crop Production Ram Swaroop Meena,2019-09-06 The cropping system is one of the important components of sustainable agriculture since it provides more efficient nutrient cycling As such balanced fertilization must be based on the concept of sustainable crop production Feeding the rapidly growing world population using environmentally sustainable production systems is a major challenge especially in developing countries A number of studies have highlighted the fact that degradation of the world s cultivated soils is largely responsible for low and plateauing yields Soil is lost rapidly but only formed over millennia and this represents the greatest global threat to nutrient dynamics in agriculture This means that nutrient management is essential to provide food and nutritional security for current and future generations Nutrient dynamics and soil sustainability imply the maintenance of the desired ecological balance the enhancement and preservation of soil functions and the protection of biodiversity above and below ground Understanding the role of nutrient management as a tool for soil sustainability and nutritional security requires a holistic approach to a wide range of soil parameters biological physical and chemical to assess the soil functions

and nutrient dynamics of a crop management system within the desired timescale Further best nutrient management approaches are important to advance soil sustainability and food and nutritional security without compromising the soil quality and productive potential Sustainable management practices must allow environmentally and economically sustainable yields and restore soil health and sustainability This book presents soil management approaches that can provide a wide range of benefits including improved fertility with a focus on the importance of nutrient dynamics Discussing the broad impacts of nutrients cycling on the sustainability of soil and the cropping systems that it supports it also addresses nutrient application to allow environmentally and economically sustainable agroecosystems that restore soil health Arguing that balanced fertilization must be based on the concept of INM for a cropping system rather than a crop it provides a roadmap to nutrient management for sustainability This richly illustrated book features tables figures and photographs and includes extensive up to date references making it a valuable resource for policymakers and researchers as well as undergraduate and graduate students of Soil Science Agronomy Ecology and Environmental Sciences

Integrated Nutrient Management (INM) in a Sustainable Rice-Wheat Cropping System Anil Mahajan, R. D. Gupta, 2009-05-07 Agriculture is the main occupation in India and about 75% of its population depends directly or indirectly on agriculture for their livelihood It is the dominant sector that contributes 18% of the gross domestic product Thus agriculture is the foundation of the Indian economy The maximum share of Indian exports is also from the agriculture sector As the population of the country is increasing tremendously approximately at the rate of 19 million every year over the existing population of more than 1 billion approximately 1.18 billion the food grain production must necessarily be increased This can be done by increasing crop production to match the population growth rate of 2.2% per annum which is expected to stabilize at 1.53 billion around 2050 There is no doubt that the Green Revolution in India during the late 1960s brought self sufficiency in food grain production mainly through the increase in rice and wheat crop yields the two main crops of the country which play an important role from food security point of view However the excessive use of fertilizers and pesticides and the neglect of organic manures for these crops has resulted in the deterioration of physical chemical and biological health of the rice and wheat growing soils Owing to the deterioration of the health of these soils the productivity of

the rice wheat cropping system has now either got reduced or in some places has become constant for the last decade
