Nutrient Regulation during Pregnancy, Lactation, and Infant Growth Lindsay Allen,Janet King,Bo Lönnerdal,2013-11-22 Almost every aspect of energy and nutrient metabolism is altered by hormonal and other physiological changes during pregnancy and lactation While it is evident that hormonal adjustments affect nutrient requirements these are rarely considered when nutrient recommendations are made for pregnant or lactating women and often neglected during evaluation of nutritional status In addition changes in nutrient metabolism during the stages of pregnancy and of lactation are usually considered separately while in reality events during pregnancy can have a major influence on nutritional status and nutrient

requirements during lactation The purpose of this volume is to describe changes in the metabolism of important nutrients during pregnancy and lactation including the physiological basis for these changes and their implications for nutrient requirements and assessment Authors have considered such issues as inter relationships between endocrine changes and nutrient metabolism at the tissue cellular and molecular level alterations in nutrient binding proteins the efficiency of nutrient absorption and retention and the impact on maternal as well as fetal nutritional status Another unique aspect of this book is the focus on pregnancy and lactation as a continuum **Maternal, Fetal, & Neonatal Physiology** Susan Tucker Blackburn, 2007 No further information has been provided for this title **Nutrition and Metabolism** Susan A.
