Ontology Of Time:

   Physics of Ontology and Time Richard Yegian,2020-05-10 The convergence of ontology and time evokes two underlying elements of existence One element grapples with a definition of the ontological status of time temporal relations and the nature of time The second element reveals the temporal status or temporality of existing entities Perhaps practicably time cannot be postulated without subsuming beings and conversely beings cannot be postulated without subsuming time The author uses physics to present an anecdotal analysis of these fundamental elements as a determinant of the self and one s reality   **The Ontology of Time** L. Nathan Oaklander,2013-05-24 Studies in Analytic PhilosophySeries Editor Quentin Smith Western Michigan UniversityL Nathan Oaklander is one of the leading philosophers of time defending the tenseless or B Theory of time He has remained at the forefront of this field since the early 1980s and today he is arguably the most formidable opponent of the tensed or A theory of time Much of the direction of the debate in this field for the past twenty years or so especially in regards to the new tenseless theory of time has been influenced by Oaklander s work This book presents a carefully argued defense of the tenseless theory of time The topics discussed include the ontology of A and B theories of time presentism the open future theory the A B theory defending the B theory of time temporal experience temporal semantics and time identity responsibility and freedom L Nathan Oaklander Flint MI is professor of philosophy and chair of the Department of Philosophy at the University of Michigan Flint He is the author or editor of numerous books on philosophy and the problem of time including Time Change and Freedom and The Importance of Time   **The Ontology of Time** A. Chernyakov,2002-08-31 To understand the role of time within the scope of 20th century ontology after the fundamental works of E Husserl M Heidegger P Ricoeur and E Levinas means to develop simultaneously the ontology of time My aim is to demonstrate that in a definite sense the postmodern onto logy is chrono logy The argument proceeds and this constitutes its essential novelty within the multidimensional space involving not only the synchronic stratum of current conceptuality in its internal logical relationships but also the diachronic axis of conceptual genesis I apply different strategies of analysis in order to emphasize that the concept of the human Self the concept of being and the concept of time are inseparably linked with one another To this triad I add one more link of a theological nature viz the relationship between God and the human mind as it has been developed in Orthodox apophatic theology and during the Scholastic controversies concerning the problem of visio Dei   *The Ontology of Time* L. Nathan Oaklander,2004 L Nathan Oaklander is one of the leading philosophers of time defending the tenseless or B Theory of time He has remained at the forefront of this field since the early 1980s and today he is arguably the most formidable opponent of the tensed or A theory of time Much of the direction of the debate in this field for the past twenty years or so especially in regards to the new tenseless theory of time has been influenced by Oaklander s work This book presents a carefully argued defense of the tenseless theory of time The topics discussed include the ontology of A and B theories of time presentism the open future theory the A B theory defending

the B theory of time temporal experience temporal semantics and time identity responsibility and freedom   *The Ontology of Spacetime* ,2006-07-10 This book contains selected papers from the First International Conference on the Ontology of Spacetime Its fourteen chapters address two main questions first what is the current status of the substantivalism relationalism debate and second what about the prospects of presentism and becoming within present day physics and its philosophy The overall tenor of the four chapters of the book s first part is that the prospects of spacetime substantivalism are bleak although different possible positions remain with respect to the ontological status of spacetime Part II and Part III of the book are devoted to presentism eternalism and becoming from two different perspectives In the six chapters of Part II it is argued in different ways that relativity theory does not have essential consequences for these issues It certainly is true that the structure of time is different according to relativity theory from the one in classical theory But that does not mean that a decision is forced between presentism and eternalism or that becoming has proved to be an impossible concept It may even be asked whether presentism and eternalism really offer different ontological perspectives at all The writers of the last four chapters in Part III disagree They argue that relativity theory is incompatible with becoming and presentism Several of them come up with proposals to go beyond relativity in order to restore the prospects of presentism Space and time in present day physics and philosophy Introduction from scratch of the debates surrounding time Broad spectrum of approaches coherently represented   **Origen — Cosmology and Ontology of Time** Panayiotis Tzamalikos,2006-02-01 Origen s Cosmology and Ontology of Time constitute a major catalyst and a massive transformation in the development of Christian doctrine The author challenges the widespread impression about this theology being bowled head over heels by its encounter with Platonism Gnosticism or Neoplatonism and casts new light on Origen s grasp of the relation between Hellenism Hebrew thought and Christianity Against all ancient and modern accounts the ingrained claim that Origen sustained the theory of a beginningless world is disconfirmed He is argued to be the anticipator and forerunner of critical notions with his innovations never having been superseded While some of the accounts afforded by subsequent Christian writers were more extended they were not fuller Of them Augustine just fell short of even accurately echoing this Theory of Time since he introduced affinity with Platonism at points where Origen had instituted a radical dissimilarity With his background fruitfully brought into the study of these questions Origen s propositions are genuine innovations not mere advances however massive

Formal Ontology in Information Systems Achille C. Varzi,Laure Vieu,2004 Just as ontology developed over the centuries as part of philosophy so in recent years ontology has become intertwined with the development of the information sciences Researchers in such areas as artificial intelligence formal and computational linguistics biomedical informatics conceptual modeling knowledge engineering and information retrieval have come to realize that a solid foundation for their research calls for serious work in ontology understood as a general theory of the types of entities and relations that make up their respective domains of inquiry In all these areas attention has started to focus on the content of information rather than

on just the formats and languages in terms of which information is represented A clear example of this development is provided by the many initiatives growing up around the project of the Semantic Web And as the need for integrating research in these different fields arises so does the realization that strong principles for building well founded ontologies might provide significant advantages over ad hoc case based solutions The tools of Formal Ontology address precisely these needs but a real effort is required in order to apply such philosophical tools to the domain of Information Systems Reciprocally research in the information science raises specific ontological questions which call for further philosophical investigations

Cameron,2015-08-20 Ross P Cameron argues that the flow of

time is a genuine feature of reality He suggests that the best version of the A Theory is a version of the Moving Spotlight view according to which past and future beings are real but there is nonetheless an objectively privileged present Cameron argues that the Moving Spotlight theory should be viewed as having more in common with Presentism the view that reality is limited to the present than with the B Theory the view that time is just another dimension like space through which things are spread out The Moving Spotlight view on this picture agrees with Presentism that everything is the way it is now it simply thinks that non present beings are amongst the things that are now some way Cameron argues that the Moving Spotlight theory provides the best account of truthmakers for claims about what was or will be the case and he defends the view against a number of objections including McTaggart s argument that the A Theory is inconsistent and the charge that if the A Theory is true but presentism false then we could not know that we are present The Moving Spotlight defends an account of the open future that what will happen is as yet undetermined Land argues that this is a better account than that available to the Growing Block theory **Web Technologies and Applications** Lei Chen,Yan Jia,Timos Sellis,Guanfeng Liu,2014-08-15 This book constitutes the refereed proceedings of the 16th Asia Pacific Conference APWeb 2014 held in Changsha China in September 2014 The 34 full papers and 23 short papers presented were carefully reviewed and selected from 134 submissions The papers address research development and advanced applications of large scale data management web and search technologies and information processing
