Conference Proceedings ACM Special Interest Group on Programming Languages, 1993 **OOPSLA '94** OOPSLA (Conference), 1994 *OOPSLA '94* Association for Computing Machinery. Special Interest Group on Programming Languages, 1994 **Conference proceedings / OOPSLA '94 : ninth annual conference ; [23-27 October 1994, Oregon Convention Center, Portland, Oregon, USA]** OOPSLA (9, 1994, Portland, Or.), 1994 *ECOOP '95, Object-oriented Programming* Walter Olthoff, 1995 This book presents the carefully refereed proceedings of the 9th European Conference on Object Oriented Programming ECOOP 95 held in Aarhus Denmark in August 1995 Besides the scientific conference documented in this book ECOOP 95 included a number of tutorials and workshops as well as a two day technology exhibition and thus reflects the full spectrum of Object Oriented Programming The volume presents three invited contributions and 18 full research papers selected from more than 90 submissions The papers are organized in sections on types programming languages reflective programming and verification implementation concurrency and specification and distribution and interfaces PUBLISHER S WEBSITE **Object-Technologies for Advanced Software** Kokichi Futatsugi, Satoshi Matsuoka, 1996-02-28 This book constitutes the refereed proceedings of the Second International Symposium on Object Technologies for Advanced Software ISOTAS 96 held in Ishikawa Japan in March 1996 ISOTAS 96 was sponsored by renowned Japanese and international professional organisations The 14 papers included in final full versions together with the abstracts of four invited papers were carefully reviewed and selected from a total of 56 submissions they address most current topics in object software technology object oriented programming object oriented databases etc The volume is organized in sections on design and evolution parallelism and distribution meta and reflection and evolution of reuse *Conference Record of POPL '96*, 1996 *Efficient Polymorphic Calls* Karel Driesen, 2012-12-06 The implementation of object oriented languages has been an active topic of research since the 1960s when the first Simula compiler was written The topic received renewed interest in the early 1980s with the growing popularity of object oriented programming languages such as C and Smalltalk and got another boost with the advent of Java Polymorphic calls are at the heart of object oriented languages and even the first implementation of Simula 67 contained their classic implementation via virtual function tables In fact virtual function tables predate even Simula for example Ivan Sutherland's Sketchpad drawing editor employed very similar structures in 1960 Similarly during the 1970s and 1980s the implementers of Smalltalk systems spent considerable efforts on implementing polymorphic calls for this dynamically typed language where virtual function tables could not be used Given this long history of research into the implementation of polymorphic calls and the relatively mature standing it achieved over time why one might ask should there be a new book in this field The answer is simple Both software and hardware have changed considerably in recent years to the point where many assumptions underlying the original work in this field are no longer true In particular virtual function tables are no longer sufficient to implement

polymorphic calls even for statically typed languages for example Java's interface calls cannot be implemented this way Furthermore today's processors are deeply pipelined and can execute instructions out of order making it difficult to predict the execution time of even simple code sequences

Concurrent Objects and Beyond Gul Agha, Atsushi Igarashi, Naoki Kobayashi, Hidehiko Masuhara, Satoshi Matsuoka, Etsuya Shibayama, Kenjiro Taura, 2014-09-09 This Festschrift volume includes a collection of papers written in honor of the accomplishments of Professor Yonezawa on the occasion of his 65th birthday in 2012 With a few exceptions the papers in this Festschrift were presented at an international symposium celebrating this occasion Also included are reprints of two of Professor Yonezawa's most influential papers on the programming language ABCL The volume is a testament strong and lasting impact Professor Yonezawa's research accomplishments as well as the inspiration he has been to colleagues and students alike

OOLIS'94 Dilip Patel, Yuan Sun, Shushma Patel, 2012-12-06 This volume contains the papers presented at the International Conference on Object Oriented Information Systems OOLIS 94 held at South Bank University London December 19-21 1994 In response to our call for papers a total 85 papers from 24 different countries were submitted Each paper was evaluated by at least two Program Committee members and an additional reviewer Together we selected 41 papers for presentation at the conference and inclusion in the Proceedings Also included are the keynote addresses by Peter Gray and Michael Jackson The other submissions were recommended for presentation in the poster sessions Peter Gray our invited speaker evaluates the problems of object oriented systems and data independence by looking at how object oriented database applications are failing to perceive its benefits and instead rely too much on encapsulation He suggests alternative kinds of object storage to preserve data independence The second invited speaker Michael Jackson describes a way of solving problems by focusing directly on the problems themselves their components and structures and on the relationships between the problem and the solution method He discusses a particular view of the role of object orientation in software development

Languages and Compilers for Parallel Computing Chua-Huang Huang, 1996-01-24 This book presents the refereed proceedings of the Eighth Annual Workshop on Languages and Compilers for Parallel Computing held in Columbus Ohio in August 1995 The 38 full revised papers presented were carefully selected for inclusion in the proceedings and reflect the state of the art of research and advanced applications in parallel languages restructuring compilers and runtime systems The papers are organized in sections on fine grain parallelism interprocedural analysis program analysis Fortran 90 and HPF loop parallelization for HPF compilers tools and libraries loop level optimization automatic data distribution compiler models irregular computation object oriented and functional parallelism

A Theory of Distributed Objects Denis Caromel, Ludovic Henrio, 2005-07-14 Distributed and communicating objects are becoming ubiquitous In global Grid and Peer to Peer computing environments extensive use is made of objects interacting through method calls So far no general formalism has been proposed for the foundation of such systems Caromel and Henrio

are the first to define a calculus for distributed objects interacting using asynchronous method calls with generalized futures i e wait by necessity a must in large scale systems providing both high structuring and low coupling and thus scalability The authors provide very generic results on expressiveness and determinism and the potential of their approach is further demonstrated by its capacity to cope with advanced issues such as mobility groups and components Researchers and graduate students will find here an extensive review of concurrent languages and calculi with comprehensive figures and summaries Developers of distributed systems can adopt the many implementation strategies that are presented and analyzed in detail Preface by Luca Cardelli

Object - Oriented Database Systems : Approaches and Architectures Prabhu C.s.r.,2010-11 This well received book now in its third edition is a comprehensive presentation of the fundamentals of object oriented database systems OODBMS It provides extensive coverage of the different approaches to object data management including the three major approaches semantic database systems approach object oriented programming language extension approach and the relational extension approach as well as the various types of architectures of object oriented database systems The book discusses all recent developments in this field such as the emergence of Java as the dominant object oriented programming language resulting in upcoming OODBMS products such as Ozone and the provision of object oriented database features in object relational database systems ORDBMS products such as Oracle 9i and DB2 The new edition provides an extensive discussion of PostgreSQL a popular open source object oriented database system which has emerged as a viable alternative to expensive commercial database systems such as Oracle The book is extensively illustrated which enables students to develop a firm grasp of the underlying concepts The chapter end exercises help in testing the students comprehension of the

fundamental principles The book is primarily meant for students of IT related programmes having courses in database systems Computer professionals will also find the book immensely useful

Smalltalk and Object Orientation John Hunt, 2012-12-06 This book was originally written to support an introductory course in Object Orientation through the medium of Smalltalk and VisualWorks in particular However it can be used as a book to teach the reader Smalltalk to introduce object orientation as well as present object oriented design and analysis It takes as its basic premise that most Computer Scientists I Software Engineers learn best by doing rather than from theoretical notes The chapters therefore attempt to introduce concepts by getting you the reader to do things rather than by extensive theoretical discussions This means that these chapters take a hands on approach to the subject and assume that the student reader has a suitable Small talk environment available to them The chapters are listed below and are divided into six parts The reader is advised to work through Parts 1 and 3 thoroughly in order to gain a detailed understanding of object orientation Part 2 then provides an introduction to the Smalltalk environment and language Other chapters may then be dipped into as required For example if the reader wishes to hone their Smalltalk skills then the chapters in Part 4 would be useful However if at that point they wish to get on and discover the delights of graphical user interfaces in Smalltalk then Part 5 could be read next Part 6 presents some more advances subjects such as metaclasses and concurrency which are not required for straight forward Small talk development

Software Engineering Techniques Applied to Agricultural Systems Petraq Papajorgji, Panos M. Pardalos, 2005-12-28 Software Engineering Techniques Applied to Agricultural Systems presents cutting edge software engineering techniques for designing and implementing better agricultural software systems based on the object oriented paradigm and the Unified Modeling Language UML The book is divided in two parts the first part presents concepts of the object oriented paradigm and the UML notation of these concepts and the second part provides a number of examples of applications that use the material presented in the first part The examples presented illustrate the techniques discussed focusing on how to construct better models using objects and UML diagrams More advanced concepts such as distributed systems and examples of how to build these systems are presented in the last chapter of the book The book presents a step by step approach for modeling agricultural systems starting with a conceptual diagram representing elements of the system and their relationships Furthermore diagrams such as sequential and collaboration diagrams are used to explain the dynamic and static aspects of the software system
