Moran, 2015-09-16 The policy of the United States and by extension that of many oil importing countries toward OPEC countries is in large part a function of an estimate of the factors that condition oil decisions in exporting countries In this title originally published in 1978 Ted Moran examines how immune OPEC can expect to be to the struggles over market shares that traditionally have beset attempts to organize natural resource cartels Moran's research leads him to argue that skyrocketing commitments to growth and social betterment leave little slack in national budgets and thus preclude output reductions for any extended period or at least act as a substantial

deterrent unless such reductions come in support of an effort to raise real oil prices substantially For any student interested in international policy making economic development or environmental studies this title offers fascinating insights into the oil industry

Producing Liquid Fuels from Coal James T. Bartis, Frank A. Camm, David Santana Ortiz,2008 Record high world oil prices have prompted renewed interest in producing liquid fuels from coal The United States leads the world in recoverable coal reserves Moreover the technology for converting coal to liquid fuels already exists and production costs appear competitive at world oil prices well below current levels Yet despite its promise private investment in coal to liquids CTL technology is being impeded by three uncertainties where oil prices are heading what it actually costs to produce coal derived fuels and how greenhouse gas emissions will be regulated A domestic CTL industry could produce as much as three million barrels per day of transportation fuels by 2030 Having such an industry would yield important energy security benefits most notably a lowering of world oil prices and a decrease in wealth transfers from oil users to oil producers But establishing a large CTL industry also raises important policy and environmental issues associated with climate change coal

mining and water consumption Weighing both benefits and costs it makes sense for the United States to pursue an insurance or hedge strategy that promotes the early construction and operation of a limited number of commercial CTL plants This book presents an in depth review of the prospects of and policy governance and environmental issues associated with establishing a CTL industry in the United States provided by publisher
