Open Systems The Reality:

Schleiermacher and Whitehead: Open Systems in Dialogue (Theologische Bibliothek Töpelmann) Christine Helmer, 2004
This collection of essays stages a dialogue between Friedrich Schleiermacher and Alfred North Whitehead on significant features of open system. The volume offers new options for rehabilitating system for future theological and philosophical thinking by opening system to a flexible relation with changing reality. Key ingredients for system are discussed in three areas of contact between Schleiermacher and Whitehead. One such ingredient concerns historical precedents figuring crucially in Western systematic philosophy. Another feature is the systematic categorization of experience that relates epistemology metaphysics and the empirical sciences. System is also brought to bear on pressing contemporary issues such as ethics and religious pluralism.

The Treachery of Realities Sal Restivo, 2025-03-31. This volume targets the contemporary atmosphere of lies post truths and alternative facts. Previously we had no reason to think humanity was about to have its dinosaur moment we could be confident of surviving for millennia. It now seems that humanity's future might be a matter of decades given the variety of existential threats we face from climate change and asteroids to robots and AI. We are not going to save ourselves driven by faith belief hopes prayers and wishes in an atmosphere of science deniers. What is required is an investment in a renewed and re energized secular worldview guided by the sociological imagination and opposed to conventional reasoning and action.

Knowledge, Complexity and Innovation Systems Manfred M. Fischer,Josef Fröhlich,2013-11-27 In recent years there has been growing scientific interest in the triangular relationship between knowledge complexity and innovation systems The concept of innovation systems carries the idea that innovations do not originate as isolated discrete phenomena but are generated through the interaction of a number of actors or agents This set of actors and interactions possess certain specific characteristics that tend to remain over time Such characteristics are also shared by national regional sectoral and technological interaction systems They can all be represented as sets of institutional actors and interactions whose ultimate goal is the production and diffusion of knowledge The major theoretical and policy problem posed by these systems is that knowledge is generated not only by individuals and organisations but also by the often complex pattern of interaction between them To understand how organisations create new products new production techniques and new organisational forms is important An even more fundamental need is to understand how organisations create new knowledge if this knowledge creation lies in the mobilisation and conversion of tacit knowledge Although much has been written about the importance of knowledge in management little attention has been paid to how knowledge is created and how the knowledge creation process is managed The third component of the research triangle concerns complexity Handbook of Alternative Theories of Political Economy
