

10 Resource Kit Remote Administration Tools

Advertisement

Work fast and smart with these Win2K and NT utilities

I'll wager that all system administrators, and especially those who manage hundreds or thousands of remote systems, rely heavily on the *Microsoft Windows 2000 Server Resource Kit* or the *Microsoft Windows NT Server 4.0 Resource Kit* to help them do their jobs. I constantly find new and useful resource kit utilities for performing critical remote administration tasks. In fact, the resource kits contain so many helpful remote administration tools that I have trouble remembering them all. So, I've rounded up 10 of my favorite tools—5 each for Win2K and NT 4.0—that most remote administrators will find invaluable for performing their daily systems administration tasks.

I've chosen tools that I rely on heavily to administer a large Win2K and NT environment. I provide usage examples for each tool to give you a sense of its value and how you might use it in your environment. Although my discussion of the tools assumes that you've downloaded *Microsoft Windows NT Server 4.0 Resource Kit Supplement One* and *Microsoft Windows NT Server 4.0 Resource Kit Supplement 2*, most of the tools come with the base resource kits.

One point I want to make before I dive into the tools discussion is that the Win2K Server resource kit has raised the bar for the number of useful tools a resource kit provides. Some of these new tools work only with Win2K, but others work equally well with NT 4.0. None of the Win2K tools I mention work on NT, but other Win2K tools do. If you come across other Win2K resource kit tools that you'd like to use with NT, you might find that testing them for backward compatibility pays off.

5 Tools for Win2K

Here are the five tools I've found most useful for remotely managing Win2K systems. Many of these tools help you manage features such as the Windows Installer and Group Policy, which are new to Win2K. Some of the tools in my Win2K toolkit don't explicitly support an option to run against remote machines. However, you can use a variety of techniques to make local tools work remotely. For example, Win2K resource kit tools such as *Rsrmid* and *Rconsoic* let you install a remote shell capability on your Win2K devices. After you install the remote shell, you can use it to copy a tool to the remote machine and run that tool remotely.

1. Adding. *Adding.exe* is a multifaceted diagnostic tool that provides information about workstation or server applications that you've used Windows Installer technology to install. *Adding.exe* also can tell you whether the current session is a Win2K Server Terminal Services (Terminal Services) session. You can instruct *Adding* to return per-user or per-machine information. The tool also returns event-log entries related to Group Policy's software installation feature. Given the complexity of this Group Policy feature, *Adding* is invaluable for helping you understand what's happening on a workstation that's subject to a software installation policy.

[Figure 1](#) shows a command that generates a verbose log for a workstation that's in a Win2K domain and that uses Group Policy-based software installation. The command's */verbose:tru*
