for Teaching Introductory Psychology Michelle Rae Hebl,Charles L. Brewer,Ludy T. Benjamin, Jr.,2001-08-01 Like its predecessors Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom It contains an organized collection of articles from Teaching of Psychology TOP the official journal of the Society for the Teaching of Psychology Division 2 of the American Psychological Association Volume III contains 89 articles from TOP that have not been included in other volumes Another distinction between this volume and its predecessors is its emphasis on testing and assessment The book is divided into two sections Section One Issues and Approaches in Teaching Introductory Psychology contains 52 articles on critical issues such as how to approach the course understanding students interests perceptions and motives students existing knowledge of psychology including their misconceptions a comparison of introductory textbooks and tips on how to evaluate them test questions and student factors affecting exam performance an overview of different forms of feedback giving extra credit and how to deal with academic dishonesty Section Two consists of 37 articles that present

demonstrations class and laboratory projects and other techniques to enhance teaching and learning in both the introductory as well as advanced courses in the discipline This section is organized so as to parallel the order of topics found in most introductory psychology textbooks Intended for academicians who teach the introductory psychology course and or oversee grad assistants who teach the course all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology El-Hi Textbooks in Print ,1979 *Principles of Classroom Learning and Perception* Richard J. Mueller,2017-09-13 Originally published in 1974 this introductory text has been designed specifically for teachers in training and it presents the basic psychological principles governing learning perception motivation and the retention of knowledge at the time The text is carefully tailored for would be teachers in its clear and informal style and in its selective aspects of psychology which the teacher can use to advantage in his efforts to assist the child The book has an eclectic approach to psychological theory drawing upon the insights of behaviourism perceptualism and the Gestalt school as well as the developmental theories of Jean Piaget The author discusses in some detail theories concerning the nature of intelligence and the relationship between creativity and intelligence and he investigates the dynamics of social adjustment introducing the part that may be played by meditation in helping to solve some of the problems of emotional stress within the learning situation In his consideration of the management of learning the author lays much emphasis upon the importance of individual cognitive styles individualizing instruction and independent learning In one chapter Dr Mueller is concerned with factors in the measurement of personality and of performance in the classroom and he reflects upon the specific problem of objectivity in such assessment Finally some consideration is given to the problems and characteristics of the socially disadvantaged child and to the role of the teacher in helping to solve some of the learning problems of these children Operant Conditioning Derek E. Blackman,2017-09-29 The approach to psychology advocated by the radical behaviourists was often misunderstood and frequently gave rise to controversy Originally published in 1974 this book introduced current research in operant conditioning and explains the attempt to understand behaviour inherent in such experiments at the time After considering the philosophical context in which behaviouristic psychology developed the author outlines the basic characteristics of operant research by reviewing single experiments on the effects of reinforcement on behaviour Chapters on schedules of intermittent reinforcement extend this approach to more complex situations and emphasize that behaviour can be maintained and controlled in many different ways by environmental events The author then discusses recent work on conditional reinforcement and on the discriminative control of behaviour and shows how operant research has changed our understanding of these important concepts in psychology Subsequent chapters review research within the operant paradigm on the effects on behaviour of punishment anxiety aversive stimuli and drugs again by emphasising the special contribution to these topics made by operant conditioning techniques and methodology The final chapters consider the general implications of operant research for

educational practice and for clinical psychology and place this approach within the context of psychology as a whole Dr Blackman argues that it should be recognized as one important attempt to further the scientific analysis of behaviour This book filled a long recognized need for an undergraduate text in this area at the time and helped students form their own evaluation Now it should be read in its historical context **Educational Psychology in the Classroom** Henry Clay Lindgren,1971 **Learning Directory** ,1972 **National Union Catalog** ,1968 Includes entries for maps and atlases
 The National Union Catalog ,1973
