Industrial Management- Control and Profit Gideon Halevi, 2014-05-21 This volume presents controlling tools for management in order to be in a position to communicate with control engineers concerning technological decisions The main objective of manufacturing management is to make profit However in traditional manufacturing systems none of the separate stages in the process support this objective Management is not expert in any of these stages and therefore is dependent on specific experts at each stage and must follow their decisions Each stage has its own first priority which is not profit and cost This means that management does not have real control over these functional stages nor over the process as a whole This book presents controlling tools for management in order to allow them to communicate better with the experts of the particular manufacturing stages to reach better results and higher profits It is shown that most enterprises can improve their efficiency rate by between 25 and 60% by using the tools developed here *Physics and Technology of Crystalline Oxide*

Semiconductor CAAC-IGZO Shunpei Yamazaki, Masahiro Fujita, 2016-10-24 This book describes the application of c axis aligned crystalline In Ga Zn oxide CAAC IGZO technology in large scale integration LSI circuits The applications include Non volatile Oxide Semiconductor Random Access Memory NOSRAM Dynamic Oxide Semiconductor Random Access Memory DOSRAM central processing unit CPU field programmable gate array FPGA image sensors and etc The book also covers the device physics e g off state characteristics of the CAAC IGZO field effect transistors FETs and process technology for a hybrid structure of CAAC IGZO and Si FETs It explains an extremely low off state current technology utilized in the LSI circuits demonstrating reduced power consumption in LSI prototypes fabricated by the hybrid process A further two books in the series will describe the fundamentals and the specific application of CAAC IGZO to LCD and OLED displays Key features Outlines the physics and characteristics of CAAC IGZO FETs that contribute to favorable operations of LSI devices Explains the application of CAAC IGZO to LSI devices highlighting attributes including low off state current low power consumption and excellent charge retention Describes the NOSRAM DOSRAM CPU FPGA image sensors and etc referring to prototype chips fabricated by a hybrid process of CAAC IGZO and Si FETs

Advanced Applications of Rapid Prototyping Technology in Modern Engineering Md Enamul Hoque, 2011-09-22 Rapid prototyping RP technology has been widely known and appreciated due to its flexible and customized manufacturing capabilities The widely studied RP techniques include stereolithography apparatus SLA selective laser sintering SLS three dimensional printing 3DP fused deposition modeling FDM 3D plotting solid ground curing SGC multiphase jet solidification MJS laminated object manufacturing LOM Different techniques are associated with different materials and or processing principles and thus are devoted to specific applications RP technology has no longer been only for prototype building rather has been extended for real industrial manufacturing solutions Today the RP technology has contributed to almost all engineering areas that include mechanical materials industrial aerospace electrical and most recently biomedical engineering This book aims to present the advanced development of RP technologies in various engineering areas as the solutions to the real world engineering problems

Modeling Applications and Theoretical Innovations in Interdisciplinary Evolutionary Computation Samuelson Hong, Wei-Chiang, 2013-03-31 Evolutionary computation has emerged as a major topic in the scientific community as many of its techniques have successfully been applied to solve

problems in a wide variety of fields Modeling Applications and Theoretical Innovations in Interdisciplinary Evolutionary Computation provides comprehensive research on emerging theories and its aspects on intelligent computation Particularly focusing on breaking trends in evolutionary computing algorithms and programming this publication serves to support professionals government employees policy and decision makers as well as students in this scientific field Proceedings of the European Computing Conference Nikos Mastorakis, Valeri Mladenov, Vassiliki T. Kontargyri, 2010-03-25 Software testing has been considered so important that organizations can assign teams only for testing activities Testing is an important activity to ensure software quality Tests are usually run several times to certify that code maintenance did not accidentally insert defects into working parts of the software In such situations test teams shall be able to estimate the required effort to execute test cases in its schedules and to request more resources or negotiate deadlines when necessary When regarding model based testing approaches that we use in our documented Integrated and Optimized Software Testing methodology IOSTP 1.4 a high number of test cases can be automatically generated As team resources are limited it may be not practical to execute all generated test cases Their complexity usually determines the effort required to execute them and it can be used for planning test resources and test suites Several software development estimation models have been proposed over the years However these models do not estimate the effort for executing a given test suite since their estimations are based on software development complexity instead of its test planning test case design and test execution complexity According to our reading of the literature e.g. 5.14 best practices in model based effort estimation include Local calibration or LC i.e. using local data to set two special tuning parameters Stratification i.e. given a database of past projects and a current project to be estimated restrict local calibration to just those records from similar projects *Batch Chemical Process Integration* Thokozani Majozi, 2010-04-30 Batch Chemical Process Integration Analysis Synthesis and Optimization is an excellent source of information on state of the art mathematical and graphical techniques for analysis synthesis and optimization of batch chemical plants It covers recent techniques in batch process integration with a particular focus on the capabilities of the mathematical techniques There is a section on graphical techniques as well as performance comparison between graphical and mathematical techniques Prior to delving into the intricacies of wastewater minimisation and heat integration in batch processes the book introduces the reader to the basics of scheduling which is aimed at capturing the essence of time A chapter on the synthesis of batch plants to highlight the importance of time in design of batch plants is also presented through a real life case study The book is targeted at undergraduates and postgraduate students researchers in batch process integration practising engineers and technical managers *Algebra and Coalgebra in Computer Science* Andrea Corradini, Bartek Klin, Corina Cîrstea, 2011-08-27 This book constitutes the refereed proceedings of the 4th International Conference on Algebra and Coalgebra in Computer Science CALCO 2011 held in Winchester UK in August September 2011 The 21 full papers presented together with 4 invited talks were carefully reviewed and selected from 41 submissions The

papers report results of theoretical work on the mathematics of algebras and coalgebras the way these results can support methods and techniques for software development as well as experience with the transfer of the resulting technologies into industrial practice They cover topics in the fields of abstract models and logics specialized models and calculi algebraic and coalgebraic semantics and system specification and verification The book also includes 6 papers from the CALCO tools Workshop colocated with CALCO 2011 and dedicated to tools based on algebraic and or coalgebraic principles

Meta-Heuristics Optimization Algorithms in Engineering, Business, Economics, and Finance Vasant, Pandian M.,2012-09-30 Optimization techniques have developed into a significant area concerning industrial economics business and financial systems With the development of engineering and financial systems modern optimization has played an important role in service centered operations and as such has attracted more attention to this field Meta heuristic hybrid optimization is

a newly development mathematical framework based optimization technique Designed by logicians engineers analysts and many more this technique aims to study the complexity of algorithms and problems Meta Heuristics Optimization Algorithms in Engineering Business Economics and Finance explores the emerging study of meta heuristics optimization algorithms and methods and their role in innovated real world practical applications This book is a collection of research on the areas of meta heuristics optimization algorithms in engineering business economics and finance and aims to be a comprehensive reference for decision makers managers engineers researchers scientists financiers and economists as well as industrialists

Laparoscopic Liver, Pancreas, and Biliary Surgery, Textbook and Illustrated Video Atlas Claudius Conrad, Brice Gayet, 2017-01-17 Laparoscopic Liver Pancreas and Biliary Surgery Textbook and Illustrated Video Atlas is the perfect learning tool for all surgeons managing patients requiring advanced liver pancreas and biliary surgery minimally invasively This highly immersive text and video atlas will provide surgeons from trainee to advanced levels of practice including general surgeons hepato pancreatico biliary surgeons transplant surgeons and surgical oncologists with a step by step multi media teaching atlas on performing laparoscopic liver surgery anatomically correct safely and effectively The atlas will teach the surgeons to perform anatomic liver resections of each liver segment expertly and logically and will cover lobectomies extended resections advanced laparoscopic pancreas surgery including Whipple and other procedures A special emphasis is placed on reproducibility of excellence in surgical technique Each video will be supported by outstanding illustrations for each technique and 3D renderings of the relevant anatomy The educational step by step high definition videos teach everything you need to know including critical aspects like patient positioning port placement dissection and much more Led by the pioneers in laparoscopic liver pancreas and biliary surgery Brice Gayet and Claudius Conrad the textbook chapters will be authored by world experts and will contain surgical tips and tricks garnered from their unique experiences to improve care management of complications relevant society guidelines and excellence in oncologic care for patients with hepato pancreatico biliary cancers Landmine Monitor Report ,2004 *Safety of Computer Control Systems 1983 (Safecom ' 83)* J. A. Baylis, 2014-05-17 Safety of Computer Control Systems 1983 Achieving Safe Real Time Computer Systems contains the proceedings of the Third IFAC IFIP Workshop held at Cambridge UK on September 20 22 1983 Composed of 36 chapters separated into the eight sessions of the workshop this book begins with a discussion of the safety and reliability of computer control systems Subsequent chapters explore the systems design for safety and reliability fault tolerance recovery and use of redundancy and aspects of fault tolerance for system reliability Other chapters detail specification techniques system development and quality assurance verifications and validations case studies as well as scheduling networks and communications *Hardware/Software Co-Design and Optimization for Cyberphysical Integration in Digital Microfluidic Biochips* Yan Luo, Krishnendu Chakrabarty, Tsung-Yi Ho, 2014-08-06 This book describes a comprehensive framework for hardware software co design optimization and use of robust low cost and cyberphysical digital microfluidic systems Readers

with a background in electronic design automation will find this book to be a valuable reference for leveraging conventional VLSI CAD techniques for emerging technologies e g biochips or bioMEMS Readers from the circuit system design community will benefit from methods presented to extend design and testing techniques from microelectronics to mixed technology microsystems For readers from the microfluidics domain this book presents a new design and development strategy for cyberphysical microfluidics based biochips suitable for large scale bioassay applications Takes a transformative cyberphysical approach towards achieving closed loop and sensor feedback driven biochip operation under program control Presents a physically aware system reconfiguration technique that uses sensor data at intermediate checkpoints to dynamically reconfigure biochips Enables readers to simplify the structure of biochips while facilitating the general purpose use of digital microfluidic biochips for a wider range of applications
